## INTRODUCTORY LETTER.

October 31, 1919.

*His Excellency WILLIAM D. STEPHENS,  
Governor of the State of California,  
Sacramento, California.*

DEAR SIR: I herewith submit the annual report of the Superintendent of Banks of the State of California, pursuant to section 140 of the Bank Act, enacted by the twenty-eighth session of the Legislature and effective July 1, 1909. This is the tenth annual report under the present law, but the first of the present Superintendent, who succeeded to the office by virtue of your appointment in December, 1918.

The figures here given are those of the fiscal year ending June 30, 1919. The fiscal year under discussion—the climax of four eventful years—marks the most radical transition that the financial life of California has known. For five years a world in ferment had been evolving a new heaven and a new earth, a new definition of government and a new conception of its powers, its duties and its responsibilities. In this period of evolution the world over, the things that had been were on trial for their lives before the bar of the things that are. Its agencies of government, of business and of finance that failed to meet the demands of changing conditions were, of necessity, ruthlessly scrapped, regardless of their antiquity or previous service.

That out of it all there has developed a cleaner, safer world no man may doubt.

As in government, so in finance. The wars of today are commercial—they are born of economic conditions and nurtured in the belly hunger of nations. The war was won in terms of money as well as men. The war could not have been won without money. In financing this titanic struggle, our country discovered resources that could be made available, a financial patriotism that could be called upon, and a financial capacity to shoulder staggering burdens that we had not dreamed we possessed. The patriotic response from the banks and the bankers of our country played a tremendous and unforgettable part in securing the final victory.

California may well be proud of the work done by her own banks and her own bankers in this crisis. Business of all kinds, public or private, was subordinated to the national needs. Each successive call found our patriotism more ready and our ability more conspicuous. That in

this time of trial so wonderfully met our banks should have shaken off the ultra-conservative habit of thought and taken their true part among the public utilities of our state, upon which devolved duties and the responsibilities for the growth and welfare of our people, was inevitable. The bank and the banker that were not able to recognize this changed condition and meet this new conception have fallen by the wayside.

During this fiscal year the government made its last two calls for popular financing through the medium of Liberty bonds; between these issues, short-term treasury certificates were sold direct to the banks. During this fiscal year came the sudden cessation of hostilities through the signing of the armistice. Since this event our problem has been to turn from war to peace with the same thoroughness and efficiency that we mobilized and turned from peace to war. How well this is being done and under what circumstances is the theme of this discussion.

#### TREMENDOUS GROWTH OF STATE BANKS.

The outstanding feature of our banking situation is the tremendous growth of our state banks. At a time when mammoth development and extension had become commonplace, when banking assets and banking wealth were attaining unthought-of magnitude, our banking institutions have established a series of new high records.

In analyzing the facts and figures that tell the story of the condition of state banks on June 30, 1919, the savings banks and savings departments of departmental banks must have first consideration because in our tripartite banking, savings institutions play the most significant part. Of the aggregate of \$1,132,110,034.43 in assets in all our banks, \$779,532,112.04 are the assets of our savings banks. Of a total increase during the year of \$110,600,012.57 in assets in all our banks, \$74,765,798.22 are the increase in assets of the savings banks. Of an increase during the year of \$113,283,586.96 in deposits in all our banks, \$66,854,053.26 are now deposits in our savings banks.

During the year the increase in individual deposits was \$113,283,586.96 as against \$65,678,493.44 for the preceding year. The increase in total resources was \$110,600,012.57 as compared with \$92,285,933.13 for the preceding year. At the close of the fiscal year June 30, 1919, the aggregate assets of the banks operating under state jurisdiction was \$1,132,110,034.43 and the total of deposits was \$947,333,420.85, of which \$702,534,780.23 were in the savings banks and invested in securities free from the hazards of commercial banking.

A significant feature of this inquiry is the tremendous aggregate of individual depositors in our state banks.

At the close of the fiscal year there were 1,734,212 depositors in the state banks of California. Of these 1,247,452 are savings depositors. While there was a net gain of 39,434 depositors during the year, there was a loss of 12,620 depositors in commercial banks and in commercial departments of departmental banks and an increase of 52,054 depositors in savings banks and savings departments of departmental banks.

Looking back over a period of ten years we find the average increase in savings deposits in California approximately \$25,000,000 per annum. Beginning well over a year ago we find the savings deposits in California increasing steadily, uniformly and consistently by approximately half a million dollars a day. In the latter months of 1919 this increase has been gradually raised until the last called report showed, for fifty-seven days, approximately a million a day increase. It is interesting to note that during the period of each Liberty loan there was no increase in deposits, but a decrease of approximately half a million a day for the period of the "drive." This would roughly indicate the contribution of the savings bank depositors to each loan.

Were these increases spasmodic or inconsistent, they could be accounted for on the theory of the deposit of the seasonal crop returns, etc., but their uniformity leads to but one thought, namely, that our people are making regular trips to the depositors' window in the savings banks. If we may, from these circumstances, conclude that the people of this great state have acquired the habit of thrift, what wonderful things it puts within our reach. For example, it makes possible the financing, from our current savings, of a complete highway system within half a calendar year; it makes possible the internal development of California with our own funds on a scale we have heretofore never contemplated. The following tabulation expresses the situation for the fiscal year; conditions here exemplified, however, have become increasingly conspicuous in the period from June 30 to date.

#### **ENORMOUS PROGRESS OF A YEAR IN SAVINGS BANKS.**

Compared with the reports of June 29, 1918, the condition of savings banks and of savings departments in departmental banks of the state system at the close of business on June 30, 1919, expresses the following facts:

## Savings Banks and Savings Departments.

	June 29, 1918	June 30, 1919	Increase	Decrease
<b>Resources—</b>				
Loans	\$425,920,795 05	\$428,233,356 17	\$2,312,561 12	
Bonds, warrants and other securities, including premium thereon, less all offsetting bond adjustment accounts	170,747,006 58	225,655,292 92	54,908,286 34	
Bank premises, furniture and fixtures, safe deposit vaults	19,145,235 55	18,036,653 57		\$1,108,581 98
Other real estate owned	6,605,890 11	7,520,377 59	914,487 48	
Due from banks	49,817,937 82	58,457,217 67	8,639,279 85	
Cash on hand	19,947,580 91	19,478,784 68		468,796 23
Exchanges for clearing house	1,079,136 88	1,666,298 27	587,161 39	
Checks and other cash items	568,265 10	1,676,054 72	1,107,789 62	
Other resources	4,022,996 98	5,252,395 52	1,229,398 54	
Bankers' acceptances (limited)	961,717 11	3,027,870 36	2,066,153 25	
Notes, drafts or bills of exchange (limited)	5,949,751 63	10,527,810 57	4,578,058 94	
<b>Totals</b>	<b>\$704,766,313 72</b>	<b>\$779,532,112 04</b>	<b>\$76,343,176 53</b>	<b>\$1,577,378 21</b>
<b>Liabilities—</b>				
Capital stock paid in	\$30,132,870 00	\$30,555,575 80	\$422,705 80	
Surplus	17,951,446 62	19,468,352 26	1,516,905 64	
Undivided profits	4,589,279 29	5,335,910 32	746,631 03	
Bills payable, including certificates of deposit representing money borrowed	108,000 00	22,500 00		\$85,500 00
Notes rediscounted	15,000 00			15,000 00
Deposits due to banks	526,004 36	404,973 72		121,030 64
Individual deposits	635,680,726 97	702,534,780 23	66,854,053 26	
State, county and municipal deposits	11,800,108 97	12,373,568 71	573,459 74	
Postal savings deposits	664,506 29	716,822 32	52,316 03	
Other liabilities	3,298,371 22	8,119,628 68	4,821,257 46	
<b>Totals</b>	<b>\$704,766,313 72</b>	<b>\$779,532,112 04</b>	<b>\$74,967,328 96</b>	<b>\$221,530 64</b>

There is a corollary to this condition that I shall discuss as a part of the question of bonds and bond investments for savings banks. But here let me voice a solemn obligation of every California banker to encourage and develop this habit of thrift among our people, not only for its own sake, as expressed in the welfare and comfort of the depositors, but because of the tremendous things that must be done in California, which can be done if this saving power is capitalized.

## THE STRENGTH, GROWTH AND LIQUIDITY OF COMMERCIAL BANKS.

The operations of the commercial banks and the commercial departments of departmental banks of California for the fiscal year ending June 30, 1919, disclose a strengthening of these institutions, a growth that is surprising and noteworthy and a participation in national as well as locality finance that is exceptional in volume and magnitude in a system so characteristically savings as is that of this state.

On June 30, 1919, there was an aggregate of \$179,569,979.74 in loans, an increase over the preceding year of \$21,367,297.10. Bond purchases increased during this period in the sum of \$5,888,161.32 evidencing not an indulgence in investment securities by the commercial banks but showing a participation by our commercial banks in the general endeavor to assist the federal government in its wartime difficulties.

The amount due from banks was increased \$7,269,495.90, while that due to banks was decreased \$7,154,597.39, two highly material items reflecting the purpose of these institutions to maintain a signal liquidity at a time when exigent needs of the federal government or the credit demands of contributory districts would have to be met. With the same motive cash on hand was increased \$1,676,006.24, the total in the possession of the banks being \$24,116,708.87.

Other resources in the commercial banks and the commercial departments of departmental banks decreased in the sum of \$8,906,645.10 and other liabilities increased in the sum of \$7,170,317.69. The increases and decreases are practically offsetting items reflecting the participation of California commercial banks in financing issues of United States Government war paper.

Individual deposits in those institutions increased during the year in the sum of \$46,429,533.70, the largest increase in the history of the commercial banks of the state. The aggregate at the end of this period was \$244,798,640.62.

Compared with the reports of June 29, 1918, the condition of commercial banks and commercial departments of departmental banks of the state system at the close of business on June 30, 1919, expresses the following facts:

**Commercial Banks and Commercial Departments.**

	June 29, 1918	June 30, 1919	Increase	Decrease
<b>Resources—</b>				
Loans	\$158,202,682 64	\$179,569,979 74	\$21,367,297 10	
Overdrafts	659,615 40	1,083,009 42	423,394 02	
Bonds, warrants and other securities, including premium thereon, less all offsetting bond adjustment accounts	48,098,549 45	53,986,710 77	5,888,161 32	
Bank premises, furniture and fixtures, safe deposit vaults	9,318,383 02	12,080,856 27	2,762,473 25	
Other real estate owned	794,576 45	1,015,527 20	220,950 75	
Due from banks	38,578,412 35	45,847,908 25	7,269,495 90	
Cash on hand	22,440,702 59	24,116,708 87	1,676,006 28	
Exchanges for clearing house	3,972,210 86	7,015,900 87	3,043,690 01	
Checks and other cash items	3,414,676 12	4,520,125 03	1,105,448 91	
Other resources	21,806,988 16	12,900,338 06		\$8,906,645 10
<b>Totals</b>	<b>\$307,286,792 04</b>	<b>\$342,137,064 48</b>	<b>\$34,756,917 54</b>	<b>\$8,906,645 10</b>
<b>Liabilities—</b>				
Capital stock paid in	\$33,305,295 00	\$34,391,429 14	\$1,086,134 14	
Surplus	11,594,523 65	11,796,927 43	202,403 78	
Undivided profits	4,766,497 76	5,843,646 71	1,077,148 95	
Bills payable, including certificates of deposit representing money borrowed	2,894,500 00	2,398,858 98		\$495,641 02
Notes rediscounted	1,165,173 25	2,676,264 14	1,511,090 89	
Deposits due to banks	26,162,441 98	19,007,844 59		7,154,597 39
Individual deposits	108,369,106 92	244,798,640 62	46,429,533 70	
State, county and municipal deposits	9,019,731 88	8,501,938 39		517,793 49
Postal savings deposits	382,006 40	265,216 97		117,689 43
Other liabilities	19,626,615 20	12,456,297 51		7,170,317 69
<b>Totals</b>	<b>\$307,286,792 04</b>	<b>\$342,137,064 48</b>	<b>\$50,306,311 46</b>	<b>\$15,456,039 02</b>

Trust companies and trust departments of departmental banks, operating under state jurisdiction, have shown a very satisfactory development during the year. These institutions, restricted in this state solely to fiduciary functions and enjoying none of the privileges of banks, are slow in growth. Their success, however, is sure and they form a most admirable feature of our departmental banking.

During the fiscal year these institutions increased their own assets almost a million dollars and added to their trust responsibilities considerably more than six million dollars. At the beginning of the fiscal year the assets actually owned by trust companies and trust departments of departmental banks made a total of \$9,456,916.10; at the close of the fiscal year the total was \$10,440,857.91, an increase of \$983,941.81.

Private trusts, by operation of law, are not under the supervision of this department. They may, however, be characterized by interested persons as court trusts and as such become subject to the visitorial power of the State Banking Department. It is interesting to note that of an aggregate of \$71,760,628.67 under the jurisdiction of this department at the close of the fiscal year on June 30, 1919, \$11,530,365.63 were private trusts transferred into court trusts that they might receive the advantages of supervision.

#### AN ESTABLISHED FAITH IN OUR STATE TRUST COMPANIES.

Compared with the reports of June 29, 1918, the condition of trust companies and trust departments of departmental banks of the state system at the close of business on June 30, 1919, expresses the following facts:

##### Trust Companies and Trust Departments.

	June 29, 1918	June 30, 1919	Increase	Decrease
<b>Resources—</b>				
Loans	\$2,907,622 69	\$2,660,717 20	-----	\$246,905 49
Bonds, warrants and other securities, including premium thereon, less all offsetting bond adjustment accounts	4,761,294 73	5,807,857 01	1,046,562 28	
Bank premises, furniture and fixtures, safe deposit vaults	1,183,414 54	1,172,782 97	-----	10,631 57
Other real estate owned	10,731 40	20,756 56	10,025 16	
Due from banks	419,533 45	582,726 77	163,193 32	
Cash on hand	12,837 06	21,881 65	9,044 59	
Exchanges for clearing house	80 16	-----	-----	80 16
Checks and other cash items	40,651 94	33,847 59	-----	6,804 35
Advances to court trusts	84,641 43	103,380 80	18,739 37	
Other resources	36,108 70	36,907 36	798 66	
<b>Totals</b>	<b>\$9,456,916 10</b>	<b>\$10,440,857 91</b>	<b>\$1,248,363 38</b>	<b>\$264,421 57</b>
<b>Liabilities—</b>				
Capital stock paid in	\$6,581,400 00	\$7,085,900 00	\$504,500 00	
Surplus	1,842,388 25	1,390,340 00	47,051 75	
Undivided profits	734,657 15	1,021,163 48	286,476 33	
Deposits of money received from executors, administrators, guardians, assignees, receivers or trustees	198,725 42	336,957 23	138,231 81	
Other liabilities	99,715 28	106,497 20	6,781 92	
<b>Totals</b>	<b>\$9,456,916 10</b>	<b>\$10,440,857 91</b>	<b>\$983,941 81</b>	

## IMMENSE INCREASE IN BANKING POWER OF THE STATE.

Compared with the reports of June 29, 1918, the condition of state banks at the close of business on June 30, 1919, as expressed in a combination of the assets and liabilities of savings, commercial and trust company departments, disclose the following facts, among which is the experience of passing the billion dollar mark in deposits:

Combined Statement of Condition of State Banks.

	June 29, 1918	June 30, 1919	Increase	Decrease
<b>Resources—</b>				
Loans	\$587,031,100 38	\$610,464,053 11	\$23,432,952 73	
Overdrafts	659,615 40	1,083,009 42	423,394 02	
Bonds, warrants and other securities, including premium thereon, less all offsetting bond adjustment accounts	223,606,850 76	285,449,860 70	61,843,009 94	
Bank premises, furniture and fixtures, safe deposit vaults	29,647,033 11	31,290,292 81	1,643,259 70	
Other real estate owned	7,411,197 96	8,556,661 35	1,145,463 39	
Due from banks	88,815,883 62	104,887,852 69	16,071,969 07	
Cash on hand	42,401,120 56	43,617,375 20	1,216,254 64	
Exchanges for clearing house	5,051,427 90	8,682,199 14	3,630,771 24	
Checks and other cash items	4,023,593 16	6,230,027 34	2,206,434 18	
Advances to court trusts	84,641 43	105,380 80	18,739 37	
Other resources	25,866,088 84	18,189,640 94		\$7,676,447 90
Bankers' acceptances (limited)	961,717 11	3,027,870 36	2,066,153 25	
Notes, drafts or bills of exchange (limited)	5,949,751 63	10,527,810 57	4,578,058 94	
<b>Totals</b>	<b>\$1,021,510,021 86</b>	<b>\$1,132,110,034 43</b>	<b>\$118,276,460 47</b>	<b>\$7,676,447 90</b>
<b>Liabilities—</b>				
Capital stock paid in	\$70,019,565 00	\$72,032,904 94	\$2,013,339 94	
Surplus	31,388,358 52	33,155,619 69	1,767,261 17	
Undivided profits	10,690,464 20	12,200,720 51	2,110,256 31	
Bills payable, including certificates of deposit representing money borrowed	3,002,500 00	2,421,358 98		\$581,141 02
Notes rediscounted	1,180,173 25	2,676,264 14	1,496,090 89	
Deposits due to banks	26,688,446 34	19,412,818 31		7,275,628 03

Other liabilities	23,024,701 70	20,682,423 89		2,342,278 31
<b>Totals</b>	<b>\$1,021,510,021 86</b>	<b>\$1,132,110,034 43</b>	<b>\$120,864,433 33</b>	<b>\$10,264,420 76</b>

## CURRENCY INFLATION AND DOLLAR DEPRECIATION.

That these figures reflect a wonderful prosperity in our state is self-evident. It may be safely said that never before has there been so much money in California nor in the hands of so many people. Our state has been gloriously prosperous because her prosperity is based upon the all-important thing in the world today—essential food production. While half the world is going hungry, a beneficent nature has smiled on California. From every source of her varied industries, her cotton fields, her citrus belt, her rice and grain fields, her orchards, come stories of tremendous production.

A study of the statistics of production for our essential crops shows a substantial increase in tonnage over the previous year, but an enormous increase in value. We must not be misled by a comparison, however, expressed in terms of dollars. Doubling the cost of a bushel of wheat will not increase the number of loaves of bread that it can make; and a bushel of wheat and kindred commodities are the real measure of our wealth and not the expansion of value in terms of money. It follows, therefore, that a full realization of this condition discloses menacing possibilities.

The tremendous inflation of the value of our crops, expressing itself in the tremendous increase in the resources of our banks, is part and parcel of a national currency inflation and dollar depreciation. There has followed in our state a tremendous expansion of bank credit, a dangerous corollary to the financing of war prices and wages. Every possible cost is inflated. Costs for essentially everything that enters into public consumption are so high that even normal buying means a very large increase over preceding years in liquidating purchases.

Inflated prices, large deposits and credit inflation are the interpretations by which the true condition of our banks must in part be read.

California is very prosperous, but in that prosperity are the problems involved in the conduct of a business on a dizzy level of high prices, especially those that enter into the costs of living. There is labor unrest, widespread and ominous. There are the questions of reconstruction and of readjustment that will so vitally affect our future. The relationship of wages to prices is yet to be solved. We are riding the crest of a wave that is sweeping us forward with unparalleled rapidity, but that waves are prone to break themselves on rocky shores must not be forgotten.

We will do well if we recognize the true coefficient of this expansion, whether it expresses itself in terms of crop values, of bank deposits or of credit expansion. We will do well if we recognize that we will face our gravest problem when the period of contraction comes, when prices and wages move toward a normal level. We will do well if we so lay our course that we may feel that our state banks can feel assured that their assets will then stand the acid test.

Our problem, therefore, is twofold: First, that we shall direct our financial resources to the internal development of our state, to the support of every industry and every activity that lends itself to the growth and strength of California—that we shall place back of our food production the financial strength that alone can guarantee its increase, but that we shall do all those things in an orderly far-seeing fashion, that the values that we accept today and the forces we set at work today shall survive the readjustment of tomorrow.

That our banks in California desire to do these things I have every confidence; that they shall be enabled to do these things requires that we shall place at their disposal every facility of sound regulation and every bit of sound information within our command.

#### LIQUID ASSETS IN OUR SAVINGS BANKS.

There have been times in the history of this department when its working relations with other financial agencies, particularly with the agencies of the federal government, have not been the most harmonious. Since my incumbancy I have made it a point to extend the cooperation of this department to the Federal Reserve Bank on the one hand and the national banking organization on the other.

It is my pleasure to say that we have established the most cordial personal and working relations with both these federal departments, to the end that the information and resources of each of us are common to all of us. A house divided against itself can not stand, and in the finances of California the functions of those three departments are so inextricably intermingled that this cooperation is essential.

The increase in our bank resources has tremendously widened the field for investment; and the changed conditions have affected the character of these investments. For example:

At the close of the fiscal year June 30, 1919, there was an aggregate of \$428,233,357.17 of loans in the savings banks, an increase over the preceding year of \$2,312,561.12. There was, however, an increase of \$54,908,286.34 in investments in bonds, warrants and other securities, the total investment of the preceding year being \$170,747,006.58 and that of the current year being \$225,655,292.92.

This enormous accretion in bond holdings is dominantly in obligations of the United States government and discloses the substantial response of the savings banks of this state to the necessities of war finance.

During the year the savings banks availed themselves of the privilege of purchasing bankers' acceptances and commercial paper granted to them with the purpose of permitting them to employ idle funds safely in short time securities and to encourage them in building up a veritable secondary reserve. The small aggregate of loans must be read therefore in connection with the fact that the savings banks of the system had invested \$3,027,870.36 in bankers' acceptances, an increase of \$2,066,153.25 over the preceding year and \$10,227,810.57 in commercial paper, an increase of \$4,578,058.94 over the preceding year.

**AGRICULTURAL LANDS UNDER BOND.**

To meet the need for savings bank investment had been one of the principal activities of this department during the last year. During the period of the war large development enterprises in California were practically at a standstill. Following the signing of the armistice this accumulated financial pressure was immediately upon us.

The bond market was very wide and very strong. Millions of people who had never thought of bond investments prior to the war had become habitual investors and had the wherewithal with which to buy. There came, and there is still with us, a deluge of financing of every kind through the medium of stocks and bonds. This has been the heyday of the get-rich-quick promoter and the fake financier. Thanks to an efficient blue sky law in California and an efficient administration thereof, the investing public in California has been, in a measure, protected, but none the less millions of dollars have been invested by our people in enterprises that can never return their capital.

That out of this maelstrom of paper there should be secured that which is safe for savings bank investment, has been one of our problems. Practically all of the big agricultural development projects of interior California have applied for certification of their bonds. In each instance we have made a careful appraisalment of values. We have recognized that there are three ordinary standards for establishing values and that none of these are today final.

(a) Original costs to the present holders of agricultural lands do not establish their value because of the tremendous increase in values in the last few years.

(b) Selling prices of these lands in subdivisions or of similar lands in the same locality do not establish values that may be accepted five years hence.

(c) Capitalizing the demonstrated earning power of these lands in these days of abnormal prices for every food product does not establish a valuation upon which a long-term bond may be based.

We have therefore tried to secure from among these projects for savings bank purposes, those issues predicated upon properties that represent the best we have in California; that are marching forward progressively toward subdivision, intensive cultivation and the support of additional units of population and that will appear to demonstrate an earning capacity to support a sinking fund requirement calculated to extinguish the principal of the loan within the term of its life.

We have encouraged the banks subject to our jurisdiction to extend credit to agricultural activities of every kind—first, in order that our food production might be increased, and, second, that the value of the

land that produces this food is least subject to the hazards of social, political and financial unrest. We have encouraged the thought that these loans should be upon a basis of rapid amortization.

#### VITAL AMENDMENTS TO THE BANK ACT.

These conditions were developing conspicuously when the undersigned assumed the office of Superintendent of Banks. They became the basis for an intensive discussion with representatives of the Federal Reserve Bank, the California Bankers' Association and other interested financial agencies. Out of these discussions came the amendments that were submitted to the last Legislature designed to accomplish these things:

1. To establish a basis upon which our state banks might cooperate with the federal reserve banks.

2. To broaden the field for safe and profitable investment by our savings banks.

3. To realize the wonderful opportunities that are within the reach of California today in developing our foreign trade.

4. To place more accumulations of savings bank assets within reach of commercial activities and at the same time restrict that extension within the bounds of safety.

5. To provide for an increasing liquidity in our bank assets.

These amendments are discussed in detail in the following pages of this report. I have every reason, at this time to feel that their passage was wise and that their effect will be increasingly beneficial.

At this time I wish to express my sincere appreciation of the courtesies and cooperation extended to me by the Bankers' Association through the medium of its legislative committee and by the Federal Reserve Bank. With all interested parties represented, we were able to reach a harmonious conclusion that expressed the best theoretical thought and practice within the limits of sound state regulation. The thanks of this department are also due to the members of the Legislature and particularly to the members of the banking committee in each House to whom these amendments were presented. The department was accorded the fullest, most cordial cooperation, to the end that its needs were fully met without amendment and without controversy.

The amendments adopted were of sweeping scope and have become operative only within the last few months. In view of this fact and the further fact that another annual report of this department will be submitted to you prior to the convening of the next regular session of the Legislature, I am purposely refraining from suggesting any additional legislation at this time. It would seem to be the part of wisdom to predicate such recommendations only upon a full experiment under the existing law and to present them at as short a time as possible before the session that will consider them.

## MISCELLANEOUS STATEMENT.

Because of the amazing increase in deposit liability during the fiscal period, savings banks found it necessary to increase their capital in the sum of \$422,705.80 and their surplus in the sum of \$1,516,905.64. While the aggregate of sums due from banks increased \$8,639,279.85, that due to banks decreased \$121,030.60, disclosing a marked tendency to liquidation of debts and a very material improvement in these institutions with relation to their position with their correspondent banks.

State banks reported an aggregate of \$54,681.18 and national banks a total of \$5,573.02, or a combined sum of \$60,254.20 in unclaimed deposits of more than twenty years' standing and thus subject to escheat. State banks reported \$520,381.81 and national banks \$60,301.58, or a combined sum of \$580,683.39 in unclaimed deposits of more than ten years but less than twenty years' standing. These deposits do not escheat until after the expiration of twenty years.

At the close of business on June 30, 1919, there were 425 state banks with 146 branch offices. Of these 84 are commercial banks, 114 are savings banks, 7 are trust companies, 193 are commercial and savings departmental banks, 20 are commercial, savings and trust companies, one is a commercial and trust company and 6 are savings and trust companies.

During the fiscal year nine new banks and fourteen branch offices were licensed. Thirty-four applications of a single bank to make collections of deposits from school children were granted. Nine banks extended their activities by adding new departments. Of these three were commercial departments, five were savings departments and one a trust department.

Three banks and five branch offices were closed, these results being accomplished either by sales to going institutions or by consolidations that give to the communities interested greater and more centralized banking facilities.

Three banks entered the federal system by conversion. Six banks and one branch office were sold and four banks became extinct by consolidation. Four banks changed their names.

Thirty-four banks increased their capital stock, while only two decreased their capitalization. During the year calls for reports of condition were issued for August 31, 1918, November 1, 1918, December 31, 1918, March 4, 1919, May 12, 1919, and June 30, 1919.

Looking at the situation in its larger aspect, there were two great problems confronting us in the redrafting of the California Bank Act: First, our financial relations with the world at large as they apply to the American commercial invasion of the orient and South America; and, second, the problem of the federal reserve bank as it applies to state banks in California.

**CALIFORNIA BANKS EQUIPPED TO CONTROL PACIFIC TRADE.**

California, fronting on the Pacific, the new commercial highway of the nation, closest to the Orient and within easy reach of both shores of South America, is in splendid position to take the cream of the Oriental and South American business, formerly held by Germany. Whether we shall do this will depend very largely upon the character of financial relations that we establish with those countries, and particularly upon the character of financing of their buying operations that we are able to offer.

The Japanese are keenly alive to this situation. Well financed branches of Japanese current financial organizations have been established in California for this specific purpose.

Section 58 of the Bank Act as amended is, we believe, the first comprehensive and intelligent handling of this situation. Briefly, it provides that any California bank with a capital and surplus of \$1,000,000 or more may establish foreign branches or branches in the dependencies or insular possessions of the United States for the furtherance of the foreign commerce of this state and of the United States. Second, it may invest an amount not exceeding in the aggregate ten per centum of its paid-in capital and surplus in the stock of one or more banks or corporations chartered or incorporated under the laws of the State of California and principally engaged in the international or foreign banking business in a dependency or insular possession of the United States. Every bank operating foreign branches within the limitations of this amendment shall be required to furnish information concerning the condition of such branches to the Superintendent of Banks upon demand, and shall be subject to the examination and jurisdiction of the State Banking Department.

The purpose and effect of this amendment are self-evident.

**RELATION OF STATE BANKS TO FEDERAL RESERVE SYSTEM.**

The commanding fact in the history of American finance since the adoption of the National Bank Act was the enactment of the Federal Reserve Act. This eventful statute is designed to make impossible the repetition of money panics, to insure the legitimate expansion of American credits and to prevent a waste of gold in the reserves of American banks.

None of these purposes has yet found justification in experience. There has been no occasion for a panic since the Federal Reserve Act came into being. American commercial credits would have expanded enormously under war pressure without a federal reserve law, and there has been no proper demand for rediscounts because there has been an outpouring of credit. We have not needed to husband our gold because the immense quantity of gold that has flowed to us from Europe has

not made thrift in its use necessary, and we are now striving with every energy of financial intelligence to get rid of its burden.

Results of paramount importance have, however, been attained by the federal reserve system, and at the session of the California Legislature this year it was my duty to urge the adoption of such laws as would permit the state banks of California to share in whatever benefits that might inure in a modernized federal finance.

The Federal Reserve Act has given to the national banking plan an organization it never before possessed. A unity of administration has been established in American banks. A tremendous quantity of gold is under a centralized control, and our foreign trade has received an unexampled impetus through the expedient of foreign branches of American banks and the acceptance of foreign bills.

The situation with relation to the federal reserve banking system does not lend itself to an academic discussion. Without holding any brief for the federal reserve idea, and without guaranteeing the future success of the federal reserve structure, the fact remains that it is today the dominant financial note in American finance, and this, if nothing more, demands the cooperation and support of state banks.

Upon this theory we have proceeded with the amendment of the Bank Act. We are all familiar, of course, with the situation that arose in 1917 when the federal reserve banks called for the gold in the hands of the state banks, and we are familiar with the fact that that call was answered by the patriotic California banks, entirely in defiance of the Bank Act of California and with the acquiescence of the State Banking Department. The necessity warranted the action then taken, it being thoroughly understood that it would be the first duty of the Legislature at its next session to rearrange the situation within the law.

Briefly, then, the amendments to sections 20, 56, 56a, 62, 67 and 68 provide for the entrance of state banks into the federal reserve system as member banks, but still within the jurisdiction of the laws of this state and the control of this department, for the exercise of all rights and privileges of such state member banks while in the federal reserve system, and for the general acceptance of the theory of the federal reserve system and its practical application as expressed in the form of securities in which a member bank may invest.

Section 67 provides that such a state member bank may exercise the vital privilege accorded to a member of a federal reserve bank, namely, the privilege of rediscount. Upon the theory of the establishment of a secondary reserve in the form of liquid paper rediscountable on demand at a federal reserve bank, this section permits a California member savings bank to invest a total of twenty per centum of its deposits in commercial paper of two forms: First, a bank acceptance uttered by a bank with a paid-in capital of at least \$1,000,000, this

arbitrary capitalization being established for this purpose on the theory that a million-dollar bank will have a competent credit department and a smaller bank may not; and, second, in ordinary commercial paper of a character specifically described in this section arising out of an actual commercial transaction, with a maturity of not more than six months, and upon a current statement showing a relationship of at least two to one as between quick assets and quick liabilities, including in liabilities at face value all contingent liabilities. Generally speaking, these are the definitions established to determine the eligibility of paper for rediscount with the federal reserve bank, although the federal reserve bank reserves the right to pass upon each piece of paper when presented.

In a word, this permits the member bank to have in its possession a 20 per cent line of liquid paper that may be converted into cash in emergency on demand, and opens our savings banks to a profitable line of business, while at the same time so characterizes the paper that may be there handled as to involve no question of hazard within reasonable limitations.

As a practical proposition, we must recognize the growing competition between the national banks and the state banks. If we are to maintain the integrity of our state banking system, we must meet the situation as it develops, progressively, sanely and safely. In these various liberalizing amendments to the California Bank Act, we believe we have met this situation conservatively and without invalidating any theory or principle of state regulations. We believe that under this revised act our banks may go forward serving the communities and the state in general, in a larger way than they have heretofore served, and this without forfeiting any elements which have heretofore made for safety.

As a matter of fact, the entrance of these banks into the federal reserve system, giving them the opportunity to establish a secondary line of reserve which will be a practical help in time of emergency, entitling them to the support of the federal reserve system should they need it, and, finally making them subject to the critical examination, not only of this state department but of the Federal Reserve Bank itself, will go a long way toward additional safeguard.

#### **COMMERCIAL BANK RESERVES MODIFIED TO MEET FEDERAL LAW.**

The amendments to the Bank Act, which became operative on July 22, 1919, are of such moment that it is necessary particularly to characterize them and to suggest their application in the banking system of the state.

Section 5 of the Bank Act is amended so as to enlarge the definition of commercial banking to include a capacity by commercial banks in

cities of a population not greater than 5000 persons to act as the agent for any fire, life or other insurance company authorized by the authorities of the State of California to do business in this state. Such agency shall be regulated by rules to be prescribed by the Superintendent of Banks. The section is changed in this fashion to permit commercial banks in the state system to compete upon an equality with national banks in the same locality. The amendment is of identical phrasing with an amendment to section 5202 of the Revised Statutes of the United States adopted as of date September 7, 1916, and made part of the National Bank Act. Contingent liabilities involved in such agency are removed absolutely.

Section 8 is revised to remedy a conflict that existed as between this section and section 290a of the Civil Code. The last named section was amended in 1917 so as to eliminate the requirement of the affidavit of the organizers of a banking corporation with reference to the paid-in capital thereof. Section 8 continued, however, to demand this requirement, and the elimination of this feature of section 8 is the only purpose of the correction.

Section 16 of the Bank Act was repealed. This section and section 1454 of the Code of Civil Procedure were identical in a provision which granted to certain surviving heirs of a deceased depositor in a bank, privilege to withdraw from that bank any sum not greater than \$1,000 if that sum is the aggregate of all moneys deposited in banks of this state by the deceased depositor. Section 16 of the Bank Act also gave authority for joint accounts in savings banks with right of survivorship, but as this was simply declarative of a right of contract it was not deemed necessary to retain it.

Section 19 of the Bank Act was reformed to release deposits of the United States and postal savings deposits and deposits of the State of California, and of any county and municipality in the State of California, which are secured as required by law, from the aggregate of deposit liability against which capital must be maintained in the commercial and savings banks of this state. The fact that these public deposits are secured, makes it unnecessary to require a double security by adding to the collateral pledged by the bank for the deposits an increase in capital of the bank. The purpose of the amendment is to relieve state banks, without in any sense lessening their responsibility in capital, from a burden which the national laws do not require from national banking associations.

The revision of section 20 of the Bank Act is the first of a series of amendments intended to bring the banks of the state system into relationship, established by membership in federal reserve banks, with the federal system. The scheme of reserves as fixed in the Bank Act of California is not in any way invaded or impaired. The amendment

assumes two forms: First, to permit the carrying of reserves on hand in any money or currency authorized by the laws of the United States; and, second, to allow any bank in the state to carry any or all of its reserves, either those on hand or those on deposit, in a federal reserve bank. A primary consideration is to empower such banks as become members of the federal reserve bank of the twelfth district to carry reserves established by the Federal Reserve Act for all member banks in lieu of the reserves demanded by the Bank Act of California. The amendment enables any bank under the jurisdiction of the laws of California, whether a member of the federal bank or not, to contribute its gold to the federal reserve banks without a violation of our state law, and the change will also give full freedom to all of the banks in the state to avail themselves of the privilege of entering the federal reserve system as state member banks.

#### COOPERATION BETWEEN STATE AND FEDERAL SUPERVISION.

Section 21a of the Bank Act is amended to establish new limitations within which commercial banks in the state system may borrow money. The change is intended to restrict this capacity to prevent inflation, unwise and unwarranted broadening of activities and the dangers involved in operating on borrowed money. The amendment maintains all of these restrictions, but enlarges the power of commercial banks to rediscount with a federal reserve bank such notes, drafts, bills of exchange and loans to the same extent as is granted by national law to national bank members of the federal system. The amendment is necessary to place banks in the state system on a parity of indulgence with their competing national bank members. There is granted also authority to state commercial banks to borrow any amount for the purpose of buying from the United States, United States bonds, United States Treasury certificates or notes or obligations of the United States. This is to give state banks opportunity to play their proper part in the financing of national obligations.

Section 37 of the Bank Act is revised in two vital relationships. The first permits any bank, with the previous written consent of the Superintendent of Banks, to purchase or otherwise acquire and hold the whole or any part of the capital stock of not more than one trust company organized and existing under the laws of this state; if that purchase shall not exceed 25 per cent of the capital and surplus of such bank, and also allows any bank, with the previous consent of the Superintendent of Banks, to purchase the whole or any part of the capital stock of not more than one corporation authorized and empowered to conduct a safe deposit business. The change is intended to strengthen our trust companies and also to indulge smaller banks in a desire to participate in the profits of those companies. Care is taken, however, to prevent

any commercial or savings bank from engaging in a title insurance company.

The amendment to section 43 of the Bank Act is a minor one designed to except a federal reserve bank from the necessity of being either nominated by a depositary bank or designated by the Superintendent of Banks as a reserve depositary for funds of any bank in the state system. It is assumed that any federal reserve bank, in which the banks of California may deposit, does not require such a designation as is demanded for other banking institutions.

Section 48a is a new section. Its purpose is to make effective the national law which gives the right to national banking associations to conduct a trust department in connection with their commercial banking business. The federal law places upon the state in which a national association desires to indulge fiduciary functions, the burden of making operative the provisions of the national statute. Section 48a therefore provides that the Superintendent of Banks shall have authority to perform for national associations, which are authorized to conduct a trust department in this state, such service as is demanded by the Bank Act for state trust companies. The expense of this service is to be determined by the Superintendent of Banks and to be paid by the national association receiving it. Eight national banks have accepted the privilege granted.

Section 56 of the Bank Act is changed so as to make more explicit the statement of conditions under which state banks may become members of the federal reserve bank of the twelfth district. Such state banks remain fully within the government of state law, but they are given capacity to contribute the capital required for membership from any of their three departments, commercial, savings or trust. The Superintendent of Banks is authorized to supply the federal reserve board, federal reserve bank examiners, duly appointed by the federal reserve board, or the federal reserve bank, copies of all examinations made by the Superintendent of Banks and he may disclose to the officials named any information with reference to the condition of affairs of state bank members. He may also accept the examination of the federal reserve bank of the twelfth district in lieu of the examination required under the provisions of the Bank Act. The amendment is a highly desirable one as it gives to the Superintendent of Banks opportunity to fortify his own investigations by those of an independent and competent analyst. The result, in effect, is a double examination of each state bank in each year where one was only possible. The amendment is essentially constructive legislation, valuable to the banks and all-important to the depositing public.

Although the Bank Act was amended in 1913 to give authority to state banks to become members of any federal reserve bank that might

be created by the national Congress only four state banks, possessing aggregate assets of \$9,195,520.38, availed themselves of this privilege prior to the close of the fiscal year 1918-1919.

Immediately following the amendments to the Bank Act that became effective on July 22, 1919, and the object of which was to make attractive to our banks membership in the federal reserve system, four banks, with aggregate assets of \$128,381,964.24, were granted membership. There are now pending before the federal authorities the applications of ten more banks having total assets of \$286,873,886.55. Very shortly therefore eighteen state banks, with combined assets of \$424,451,371.13, will be members of the federal reserve bank of the twelfth district. The figures herein used are representative of the assets of banks as recorded on September 12, 1919.

#### PROTECTION TO SAVINGS DEPOSITORS UPON CONVERSION OF STATE BANKS.

Section 56a is a new section and is one of the important changes in the Bank Act. It is introduced to insure the right of every state bank to convert into a national association if it so desires, but such conversion in the case of a savings bank or of a departmental bank having a savings department can be accomplished only under such conditions as will advise every depositor in the savings bank or in the bank having a savings department of the character of the change which takes place by conversion. Coincident with the application of a state bank to convert, notice of such intention shall be given to the Superintendent of Banks. Before such conversion is effected, such savings bank or departmental bank having a savings department shall place in the hands of the Superintendent of Banks a constructive notice for newspaper publication, directed to its savings depositors, of the fact of conversion and an actual notice, addressed to each and every savings depositor at his or her last known address, enclosed in a stamped and addressed envelope ready for mailing, advising said depositor that the bank has ceased to be under the jurisdiction and direction of the California State Banking Department and the Bank Act of California and is now under the jurisdiction and control of the Federal Reserve Act and the National Bank Act. Both of these notices are made effective after the conversion; one by publication and the other by mailing by the Superintendent of Banks. Such a statute was made possible by an amendment to section 5154 of the Revised Statutes of the United States, which in its new expression becomes section 8 of the Federal Reserve Act and provides that the conversion of a state bank into a national association shall not be in contravention of state law. Prior to this amendment to the federal statute any state bank, without any sanction from the state government, could convert and its savings deposits would be carried

by operation of law into a national association. Section 56*a* gives to every savings depositor in the state system the right of determining whether or not he shall remain as a depositor under state jurisdiction or as a depositor under national law.

Section 58 of the Bank Act is a new section and its character and import have already been discussed.

Section 61 of the Bank Act was also improved in several major aspects. This section is the governing section of the Bank Act for savings bank investments. It is one of the most critically established laws in any state in the union, and the changes that have been made are designed to fortify the regulations governing investments by savings banks. Savings banks are given a new privilege to invest in bonds or interest-bearing notes or obligations of England or the United Kingdom of Great Britain and Ireland or France or the Dominion of Canada or those for which the faith and credit of any one or more of said countries are pledged for the payment of principal and interest, and also bonds or interest-bearing notes or obligations of any other foreign country or government which shall first have been approved in writing by the Superintendent of Banks. The law governing investments by savings banks in notes or bonds secured by real estate is also strengthened to prevent any of the hazards which may follow locality optimism or the speculative indulgence of real estate promoters.

Section 61*a* of the Bank Act, which is the section providing for certification of savings bank investments by the Superintendent of Banks, is amended to give to the Superintendent of Banks power to extend or renew his certificate of eligibility of bonds of savings banks without requiring an application from any corporation issuing the bonds or of any person interested in them. This change was required because as soon as the bonds are certified and have become investments in savings banks the issuing corporation loses all interest in the bond, which at the expiration of a fixed period ceases to be eligible. The amendment is intended to protect savings banks in the continued holding of such bonds.

#### **EFFECTIVE LIQUIDITY WITH SAFETY GRANTED TO SAVINGS BANKS.**

Section 62 of the Bank Act, which governs, restricts and guards borrowing by savings banks, was also amended. The section is liberalized to permit savings banks, to the extent of their capital and surplus, to rediscount such assets as they may possess with a federal reserve bank and to borrow in any amount to buy from the United States, United States bonds, United States Treasury certificates or notes or obligations of the United States. The first amendment is designed to make absolutely liquid the secondary reserve of the savings bank, and the second

offers a suggestion of assistance to the federal government without impairing the character of the savings bank.

Section 65 of the Bank Act, the statute which establishes the limitations upon any relationship as between the bank, its officers, directors, agents or employees, is revised to provide that by and with the consent of the Superintendent of Banks previously obtained in writing, all directors may vote upon a loan made by one bank to another bank where the entire capital stock of one is owned by or is held in trust for the stockholders of the other bank and where all or a majority of the board of directors of each of said banks are composed of the same persons. This amendment is designed to obviate unnecessary obstacles which the section raised as against certain transactions which may be of benefit to both of the banks concerned. Another amendment to the section makes it possible for a savings bank to loan to any director, other than an officer, directly or indirectly, and to an agent or employee of a savings bank upon the security of United States bonds, United States Treasury certificates or interest-bearing notes or obligations of the United States or those for which the faith and credit of the United States are pledged for repayment of principal or interest or those issued under authority of the United States. Borrowing by officers, directors, agents or employees in savings banks is strictly restricted and very carefully supervised, but the liberalization of the section in no way creates an injurious influence in the bank as the security for the loan is beyond question.

The amendment to section 67 of the Bank Act is one of the most important of the changes in the banking statute of the state. California was the first of the American states to permit its savings banks to invest a certain proportion of their assets in liquid form, namely, in bankers' acceptances and commercial paper of a class that is considered by leading financial experts and bankers of the United States to be of such a grade that it is practically equivalent to cash. This law became operative in 1917 and restricted our savings banks to a limit of 10 per cent of their deposits in short time paper. With the advent of the federal reserve system the need of state banks to possess a greater amount of liquid assets eligible and acceptable for rediscount by the federal reserve bank of the twelfth district and thus to have at command an actual secondary reserve was apparent and the limit of investment by savings banks in liquid, short time assets was raised by the amendment this year to 20 per cent of the deposit liability of the bank. All of this 20 per cent may be invested in bankers' acceptances which bear a low rate of interest; but no more than  $12\frac{1}{2}$  per cent may be invested in commercial paper. The character of this commercial paper has the endorsement of the federal reserve board itself and is introduced in our system to give to our savings banks opportunity to

rediscount with the federal reserve bank of the twelfth district at such times as they may need. The amendment is of first importance and is one of the series necessary to the full enjoyment of the privileges and protection of the federal reserve system by banks in California. The leading authorities in the financial world consider that such a modification of the Savings Bank Act is of vital moment in protecting savings banks from danger, if not from disaster. Three of the conservative and powerful states of the Union, New York, Connecticut and Massachusetts, have followed the lead of California in this direction. Section 67 is also modified to harmonize its provisions with the alterations made in section 61 relating to loaning and investment by savings banks.

Section 68 of the Bank Act, which relates to the reserves which must be maintained by savings banks, is revised to permit the profitable admission of savings banks in the State of California into the federal reserve system. All savings banks now may place their reserves, or any part of their reserves, in the federal reserve bank of the twelfth district, but member banks must carry as reserves on hand 2 per cent in addition to the amount demanded by the Federal Reserve Act for time deposits.

#### **CONTROL OVER CREATION OF BANKS RESTORED TO DEPARTMENT.**

Section 70 is a new section qualifying every savings bank to receive as depositary or as bailee for safekeeping and storage, Liberty bonds or other bonds or securities issued by the United States government for war purposes or otherwise. The enormous acquisition of Liberty bonds by the public has created a real situation as to their safekeeping and steps are being taken in every state to afford some protection as against theft and loss.

Section 80 of the Bank Act, which is the governing section for loans made by commercial banks, is changed so that loans to any director, other than an officer, directly or indirectly, or to any agent or employee of a commercial bank may be made without limit on the security of United States bonds, United States Treasury certificates or interest-bearing notes or obligations of the United States or those for which the faith and credit of the United States are pledged for repayment of principal and interest or those issued under authority of the United States. The amendment was adopted upon the theory that such security as is offered by the interest-bearing obligations of the United States offers no hazard to the banks accepting them.

Section 90 of the Bank Act is modified simply with that reference which seeks to provide a continuity of the trust relationships established by existing trust companies before they entered the federal reserve system.

Section 123 of the Bank Act is changed to increase the appropriation required for the conduct of the State Banking Department to \$110,000 a year or as much less as may be necessary properly to administer the banks through the agencies of supervision and visitation. An increase in the revolving fund, which is directly under authority of the Superintendent of Banks, is made from \$500 to \$2,000. The opinion of both bankers and the State Banking Department is that these amendments are demanded for an adequate government of the banks. These institutions have expanded enormously within the last few years in assets and liabilities and the requirements of supervision have become very much greater than when the original fund was established.

Section 124 of the Bank Act is amended to provide that whenever the Superintendent of Banks may deem that a bank requires extraordinary or extra attention and examination he may have authority to charge at the rate of \$20 a day for such examination for the main office and for each branch office of the institution. He was formerly restricted to a charge of \$20 a day for an extraordinary examination of a bank irrespective of the number of its branch offices. The extension of branch offices has made the amendment essential.

Section 131 of the Bank Act is changed to make coincident at least three of the called reports demanded by the Superintendent of Banks with the called reports ordered by the Comptroller of the Currency. This is intended to give wider and more critical and intimate information from the point of view of state supervision and that of national.

The amendment to section 142 of the Bank Act insures that none of the records of the State Banking Department shall be deemed to be public documents nor shall any of such records be open to the inspection of the public. This protection has become vital because of the endeavors of ill-advised or ill-disposed persons to obtain information of the condition of banks from the State Banking Department. The relationship between the department and the banks is a confidential one and all of the records must be confidential records. The amendment in no way restricts nor attempts to limit the right of the courts to exercise such control over the banks in evidentiary matters as they now possess.

When the Corporate Securities Act was amended in 1917, an unintentional conflict between it and the Bank Act was introduced. Considerations of the highest moment had prompted a change in the law to place exclusively within the jurisdiction and discretion of the Superintendent of Banks the organization as well as the licensing of state banks. The control of the Superintendent of Banks over the creation of banking corporations was taken away by the change in the Corporate Securities Act in 1917, but it was restored by the Legislature at its session this year.

**CALIFORNIA'S CONTRIBUTION TO THE GOLD HOARD OF THE UNION.**

One of the most interesting features of the functioning of California banks during the fiscal year that closed June 30, 1919, was the splendid response made by our financial institutions to the appeals of the federal government to give up all available gold that its credit structure, already enormous in its proportions, might be maintained to meet any need, even the most exacting, of wartime finance. This response was made in violation of our law under the spur of a patriotic appeal.

The importunities of the Federal Reserve Bank of San Francisco for gold during this period were insistent. This department gave its hearty cooperation and the banks generously met the appeal. At the beginning of the fiscal year the commercial banks and the commercial departments of departmental banks held \$13,932,092.26 in gold, gold certificates which are warehouse receipts for gold, and United States notes, which have an underlying security of one-third gold. At the close of the fiscal year our commercial banks and commercial departments of departmental banks held in gold, gold certificates and United States notes \$8,150,768.73, a decrease of \$5,781,323.53 during the year.

At the beginning of this fiscal period the savings banks and savings departments of departmental banks held \$12,958,838 in gold, gold certificates and United States notes. At the end of the fiscal year the savings banks and savings departments of departmental banks held \$4,981,568.87, a decrease during the year of \$7,977,269.13. The total decrease in the holdings of gold, gold certificates and United States notes in both savings and commercial institutions of the state was \$13,758,592.66.

At the commencement of the fiscal year 1918-1919 the commercial banks and commercial departments of departmental banks in the state system held \$8,508,610.33 in currency, other than gold certificates and United States notes, and in silver and minor coins. At the close of the period these institutions held in currency other than that representing gold, \$15,965,940.14, an increase during the year of \$7,457,329.81, most of which is federal reserve notes.

At the beginning of the fiscal year under consideration the savings banks and savings departments of departmental banks held in currency and in silver and minor coins, excluding gold certificates and United States notes, \$6,988,742.91. At the close of the fiscal year the savings banks and savings departments of departmental banks held in the same mediums \$14,497,215.81, an increase during the year of \$9,515,646.94, the major part of which is in federal reserve notes. The total increase in the possession of both savings and commercial banking institutions of the state in currency, other than that reflective of gold, during the year was \$16,972,976.75.

On June 30, 1919, our state banks possessed \$13,147,927.60 in gold, gold certificates and United States notes. In a year their holdings had been reduced one-half, a very commendable performance when we consider the great preference the people of the state have for gold. The distribution of the present holdings is as follows: Commercial banks and commercial departments of departmental banks, \$8,150,768.73; savings banks and savings departments of departmental banks, \$4,981,568.87; trust companies and trust departments of departmental banks, \$15,590.

The Federal Reserve Bank of San Francisco continues to ask of our banks full contribution of their gold, but I very seriously doubt the wisdom of increasing the gold reserve of the federal banking system and thus contributing to the potentialities of an inflated credit condition against which the federal reserve board has itself sounded the most emphatic warning.

It is not conceivable that we shall require in times of peace a credit expansion greater than was sufficient in times of war. Cheap money, low rates of interest and high reserves, centralized in the federal reserve system, are the inspiration for high costs and prices, speculation and stock gambling.

The legitimate occupation of the federal reserve system is to insure a positive reserve of credit all the time and not to maintain constantly a new reservoir of credit to be called upon whether it be needed or not. The credit organization of the federal reserve system must inevitably contract under peace conditions.

Federal borrowing is decreasing and war paper in our banks will, with measurable rapidity, be paid off and retired. As this occurs private borrowing will decrease. The liabilities of the federal reserve system will become less as the return to normal peace levels of trade is accomplished.

The percentage of gold reserve of the federal reserve banks will then increase. The need of the federal reserve system for the gold in our banks will abate as I assume that even the most optimistic conception of our trade under peace conditions does not involve or imply the same gigantic credit edifice which was compelled by war finance.

#### **LAZY LIQUIDATION BEING HASTENED TO A CONCLUSION.**

There are seven state banks in the possession of the Superintendent of Banks and in process of liquidation. Six of these institutions have pursued for several years a lazy course toward the final conclusion of their affairs. Delays caused by minor and inconsequential considerations have impeded the final steps in closing these defunct banks and I am using every possible legal expedient to expedite the disposition of their remaining assets and to end their long continued and needlessly expensive existence.

One of these banks, Union Savings Bank of Santa Rosa, is of immediate concern to the general public. Its doors were closed by the Superintendent of Banks on September 30, 1918. This bank had the same officers, directors and stockholders as the Santa Rosa National Bank, which, on that day, was ordered by the federal authorities to suspend. The business of each institution was so intimately and dangerously interwoven with the other that the collapse of the national bank demanded the suspension of the affiliated state bank simply as a measure of precaution to protect the depositors of the Union Savings Bank.

When I assumed the duties of Superintendent of Banks I discovered that the notice to creditors of Union Savings Bank was fatally defective. A new publication of three months was necessary, but notwithstanding this unfortunate delay I am pleased to report that I have been able to pay two dividends, aggregating eighty per cent, to depositors, within a year from the closing of the bank.

This expedition in connection with the payment of depositors in a defunct bank is without a parallel in the history of the department. I am gratified also to advise you that the depositors of Union Savings Bank will be paid in full even if claims, that I have for proper reasons rejected, be included, by court decision, in the ultimate aggregate. The first dividend to depositors, of sixty per cent, was declared on May 14, 1919, and the second, of twenty per cent, on September 16, 1919.

Of the remaining six banks in liquidation I have the following to report:

I paid a final dividend of 1.9 per cent on March 31, 1919, to the depositors of the Japanese Bank of Sacramento. Liquidation will be closed as soon as a report is made to the State Controller. This bank has been in liquidation for ten years, since October 13, 1909.

A final dividend of 2 per cent was declared on August 25, 1919, to the creditors of Union State Bank, a corporation formerly operating in San Francisco. Final report to the State Controller will be made on February 25, 1920, and the liquidation closed. This bank has been in the possession of the Superintendent of Banks since July 17, 1909.

I am now prepared to present an application to the Superior Court of California for permission to pay a final dividend of 3.25 per cent to the depositors of the State Savings and Commercial Bank, formerly of San Francisco. Upon the payment of this dividend the concluding incidents of liquidation will quickly be accomplished. This bank has been in the hands of the Superintendent of Banks since July 17, 1909.

The liquidation of Kimmon Ginko, a Japanese bank formerly doing business in San Francisco with branch offices in Los Angeles and Yokohama, is practically finished. Two small parcels of realty owned by the bank are to be sold and this will be done shortly. This bank has dragged its way toward dissolution since March 29, 1909.

I expect to close the affairs of the Japanese American Bank within six months. Several suits have obstructed the conclusion, but they will be prosecuted with energy. This bank has been in control of the Superintendent of Banks since October 18, 1909.

Much progress has been made during the year in hastening the final liquidation of Kern Valley Bank. Litigation has received needed attention, certain valuable properties have been acquired and negotiations are under way for the advantageous sale of some of the assets of the bank. Decisions upon two important suits are awaited. This bank has been in the possession of the Superintendent of Banks since May 12, 1911.

I was compelled to close Bank of Perris on April 13, 1919. The controlling stockholder of this institution had sold his stock in the bank to an adroit rascal who made the purchase that he might loot the corporation of its liquid assets. He paid nothing for the stock and absconded with a sum approximately equal to the capital and surplus of the bank.

I took possession of the institution, set in motion proceedings to cancel all outstanding stock and levied an assessment equal to the loss. The controlling stockholder, fortified by public citizens interested in the welfare of the bank, repaired the loss and on July 17, 1919, I permitted the bank to reopen its doors. It has resumed its life under conditions that give assurance of its continued usefulness in a community which very generously has given its confidence under circumstances the most trying.

Appended hereto and made a part of this report are the following:

1. Summary of condition of every state bank.
2. List of new banks and branch offices.
3. Name and compensation of each person employed and the whole amount of receipts and disbursements of the department during the fiscal year.
4. Names of banks placed in the hands of the Superintendent of Banks in process of liquidation and the amount of dividends paid thereon.
5. Miscellaneous changes in banks.
6. Reports of deposits in state and national banks unclaimed for more than twenty years.
7. Reports of deposits in state and national banks unclaimed for more than ten years.
8. Banks authorized to make collection of savings from school children.
9. Tabulated statements of condition of banks.

This report has attained its end only if it has given you an adequate conception of the tremendous growth, the potential power, the inherent virility of the state banks of California; that the glorious potentialities of our state will be adequately met by the actualities of her banks; that

with a full knowledge of the problems of reconstruction and of readjustment that surround our present and future, our banks are going forward progressively but sanely, playing their full part in the readjustment and development, but playing it within the limits of sound finance.

We realize that today's statement is for today. We realize that we are afloat on a current whose destination no man knows.

If, in the future as in the past, we shall bring to bear upon these problems the combined vision, thought and experience of all the agencies interested in their solution, then the state banks of California need have no fear, come what may.

To this end every resource of the State Banking Department of California is being directed.

Yours very truly,

CHARLES F. STERN,  
*Superintendent of Banks.*

## DIVIDENDS DECLARED.

April 1, 1912, No. 1 of 40%, paid	\$280,532 34
Not paid	4,261 82
Total	\$284,794 16
August 4, 1913, No. 2 of 10%, paid	\$89,093 27
Not paid	2,105 27
Total	\$71,108 54

To complete the liquidation we must await court decisions on appeal in the matters of Mascot oil stock and McDonald et al., collection of \$85,000.00 note. There has been the matter of court litigation in the Sunset road oil bonds that has been partially settled this past year and the securing of an undivided interest in and to oil lands in Kern County, of which sale is now pending.

ELEVENTH ANNUAL REPORT

OF THE

SUPERINTENDENT OF BANKS

OF THE

STATE OF CALIFORNIA

1920

Showing the Financial Condition of State Banks at the Close  
of Business June 30, 1920

CALIFORNIA STATE PRINTING OFFICE  
J. M. CREMIN, Superintendent  
Sacramento, 1920

## INTRODUCTORY LETTER.

October 30, 1920.

*His Excellency* WILLIAM D. STEPHENS,  
*Governor of the State of California,*  
*Sacramento, California.*

DEAR SIR: I herewith submit the annual report of the Superintendent of Banks of the State of California, pursuant to section 140 of the Bank Act, as enacted by the twenty-eighth session of the Legislature and effective July 1, 1909. This is the eleventh annual report under the present law and the second of the present Superintendent of Banks.

The figures here given are those of the fiscal year ending June 30, 1920.

As the second year since the signing of the armistice draws to its close the banking situation throughout the world is taking form on a post-war basis.

In this process of rehabilitation California is occupying a unique position. Banking in California has ceased to be local. While this state, more nearly probably than any other state in the Union, may be said to be self-supporting from the standpoint of her tremendously varied industries and resources, none the less her financial progress has taken her entirely outside and beyond her local limitations.

California today, though only eighth in population among the states of the Union, is fifth in her state bank resources. Of her total banking resources of approximately two and one-half billion dollars, approximately one and one-half billion dollars are resident in her state banking institutions. In banking power per capita, in bank deposits per capita, and in the size of the per capita deposit California stands in the front rank of the states of the Union.

During a period of rather violent financial readjustment, when liquidation was the order of the day and a decrease in banking resources quite commonplace throughout the country, the state banks of California have reached new high records both for total resources and deposits and also for an annual increase in each. The general prosperity of the state has manifested itself, not only in increasing bank deposits and resources, but in a very active and a receptive local market for high class securities. During a portion of the year at least it is probable that the bond market has been better in California than

at any other point in the United States. We have had a home market for our own securities in a volume never before known. It is quite true that these securities have been sold upon a very high interest rate basis; but the absorbing power of the local market has been conspicuous.

That these facts indicate new heights of usefulness is axiomatic; that they open new visions of future development of moment is equally certain.

In what measure and under what circumstances these conditions have been brought about is the burden of this report; under what conditions and with what assistance this development may be furthered is embodied in its recommendations.

That these conditions should obtain in the face of a disquieting situation, both present and potential, makes our stability the more conspicuous. For this has been a year of readjustment, the first of a number of such years. Whether this readjustment can be accomplished without an undue list of casualties, both in trade and finance, is the present concern of us all. To the end that this may be safely accomplished we are all committed; it demands every energy of conservative treatment from those in whose keeping is the material welfare of the state.

#### CONTRACTION AND LIQUIDATION ARE INEVITABLE.

Our economic and financial structures have been weakened by over-speculation and by price credit and currency inflation. The period of liquidation, of loan contractions and diminutions of currency issues is inevitable; it is now well under way. That it has not acted and can not act with absolute uniformity and justice is evident. During this period of contraction and liquidation many legitimate enterprises have suffered because of insufficient credit. Many needed improvements have, of necessity, waited for clear financial skies.

The peak of our financial load is now upon us as incident to the moving of the seasonal crops. At this date the crop situation throughout the state is taking form. From each quarter comes the story of falling prices, of markets that are not absorbing the normal quotas, of buyers holding aloof in expectation of lower prices. Whether it be rice in the Sacramento Valley, cotton in Imperial Valley, wool in the northern counties or beans or barley on the south coast, the general situation seems largely common to all.

These products are not being passed down from producer to middleman, from middleman to retailer and retailer to consumer in the orderly fashion of former years, whereby the financial burden was quietly and easily distributed. In considerable part these seasonal

products are passing from the fields to warehouses, being financed by various forms of loans predicated upon warehouse receipts.

Herein lies our greatest danger. It is here voiced because when it is recognized and faced it may be largely discounted.

To move these crops money has been borrowed in large amounts. To make these loans our banks have borrowed in large sums. Their total of bills payable and rediscounts for entirely legitimate crop movement purposes is very great. From the federal reserve banks down through the state banking departments and the individual banking institutions themselves, the warning has been sounded. This is no time for food speculation or for holding for a higher price. Liquidation of the collateral underlying these loans in sufficient amount to pay these obligations is essential to our economic safety and must be insisted upon by every financial agency with power so to insist.

We are committed to a descending scale of prices in all lines. The state or the bank or the individual that undertakes to stand against this pressure may dam it for the moment but will be inevitably overwhelmed. The magnitude of this situation may be gathered from a resume of crop conditions as they expressed themselves this year.

There are now noteworthy developments demonstrating that readjustment has set in to a more normal basis. There are tendencies to commodity price reductions; mercantile values are tending strongly downward. There is a distinct adverse movement in our foreign trade, and while prices do not yet record the fact, there is ample evidence that the old equilibrium is being restored both in our external and internal trade. This is shown indubitably in the staple foodstuffs, in cotton, wool, wheat, clothing, shoes and automobiles. New measures of value are unquestionably being forced into expression.

#### REACTIONARY TENDENCIES IN CERTAIN INDUSTRIES.

During the year there developed certain reactionary tendencies in several lines of industry. There was an unsettled condition in foreign markets, an uneasiness among retailers and an undoubted sensitiveness in domestic markets. Our bankers accepted the thought that the whole structure of prices and wages was created by temporary and extraordinary conditions, and while the regular trades absorbed the labor released from the war, there was an eagerness to avoid accumulations and commitments from the retailer up to the manufacturer and back to the producer. Each trade seemed to seek to establish its relation to the general situation and all were looking to a lowering of living and manufacturing costs which did not come during the fiscal year.

While the buying power of our agricultural and industrial population remained very great during the year our banks still suffered from the burden of governmental obligations.

We still have our problems of housing, transportation and public improvement. The credit situation must be relieved by a readjustment to a lower level of values. It is recognized that nothing has been gained by the great expansion of bank credit and the rise in prices.

Our banks are conscientiously following the advice of the federal reserve authorities and are seeking to restrict credit on non-essentials, to reduce their indebtedness and build up their reserves consistent with their necessary response to seasonal demands and the proper care of their maturing obligations.

The confused movement in the European exchanges further complicated our financial and economic affairs. The financial collapse of Japan had its effect on us as disclosed in our import and export statistics. The bankers of California are watching critically and carefully the Japanese situation.

The United States holds more than fifty per cent of the export and import trade of Japan, and San Francisco and the other ports of California should have most of this trade. It is natural therefore that our bankers are looking with deep interest into the development of our relations with the Orient. The part we are to play in the development of China is one calling for our deepest concern, for in that empire is an immense market for electrical and other machinery, for public utility expansion and an outlet for all sorts of material.

It is a matter of congratulation, therefore, that our banks are diverting credit from luxuries into necessities and are loaning their money for the development and movement of crops. Our banks reflect the fact that there is a pronounced decline in loans on stock exchange collateral and a very large increase in loans on commercial paper. Statistics disclose the extremely significant fact that the stock market of the United States is absorbing approximately a billion dollars less than a year ago and the released money is going to the financing of production. California plans a very large part in this movement. Our banks, which are taking for the first time in their history a large part in the commercial life of the state, accept as axiomatic that business must be based on sound, liquidating commercial paper. There has been, therefore, during the year a conservation of credit and a liquidation of nonessential loans. There has been a very large payment of real estate loans and great care in the granting of new ones. Deposits in the commercial banks have increased amazingly, and while the period of readjustment is to be probably a long one and bank loans are still heavy the abnormalism of the situation is being eliminated.

**SURVEY OF CROP CONDITIONS THROUGHOUT THE STATE.**

The agricultural products of the state for the year are good in quality and in quantity but prices are uncertain except for wine and table grapes, where the market is abnormally high. There are short crops in peaches and pears but high prices. Prunes are not as strong as at the opening of the season nor is the price of grain as high. Lemons, almonds and walnuts are facing what might very reasonably be a destructive competition from Europe.

Rice is at approximately half the price of the year before. The price for the wool clip is considered to be ruinously low. Lumber is seriously unsettled because of new freight rates. Mining shows no improvement over 1919 although California stands out brilliantly in this industry in the Union with a production of \$17,395,200 for the year.

All of the grain crops developed better than their first indications suggested. A considerable quantity of the barley crop remained at the close of the year under the handicap of a weak demand. Much of the 1919 crop was still awaiting sale. There was a dragging market but a sufficient supply. Corn and oats showed a slightly decreased yield over 1919 but lower prices and an inactive market. Hay disclosed a slightly lower yield and inactive buying. In rice a water crisis was passed and standing crops were harvested. The price remains yet problematical but holdover stocks are not expected to affect this year's prices. Early season factors in Imperial Valley cotton reflected an unfavorable condition and the south San Joaquin crops showed a spotted condition. Sugar was adversely affected by a dry season.

Practically the entire hop crop will be exported. Hops showed an increase of 2,400,000 pounds over 1919 with a current total of 17,000,000 pounds, demanding steady prices and ready market in Japan, Australia, India and South Africa.

For the year the apple crop is lighter with lower prices. The prune crop was from 180,000 to 190,000 tons. The export trade was dull, being affected by a return of part of the 1919 crop from Europe. The grape crop was equal to that of 1919, approximately 17,575 carloads with heavy shipments and phenomenal prices. The raisin crop was approximately 200,000 tons, a slight increase over that of 1919.

The citrus crop gave a good yield. The condition of the oranges was 85 per cent of normal as compared with 64 per cent of the preceding year and a ten-year average of 78 per cent. The crop was the largest since 1916. The Los Angeles territory produced 87 per cent of oranges and 97 per cent of the lemons of the state. There were shipped 27,757 carloads of oranges, lemons and grapefruit for a total value of \$81,200,000, an increase of a thousand cars and \$9,600,000 in price. These facts were accompanied by a lower cost for marketing.

The almond crop was spotted with some light weight due to lack of water for irrigation. The production was 11,000,000 pounds, 3,000,000 pounds less than in 1919 and 8,000,000 pounds below a normal yield. The walnut yield was 48,000,000 against 56,000,000 pounds for the preceding year. This crop faces an enormous foreign competition which will affect its price.

Wool opened on a declining market which showed improvement but no hope of the prices of the year before. United States investigation shows that the world supply of raw wool is tremendous. There are immense quantities in the warehouses of the wool producing countries of the world, Australia, Argentine, Uruguay, South Africa, New Zealand and England. The decline in prices began in May, and while there is very urgent demand from Central Europe, there are counter-acting difficulties in financing. Some of our banks are making solid connections with firmly established banks of Europe and expect to modify adverse conditions to some degree. The California clip for the year was 12,000,000 pounds.

A lack of rainfall resulted in many of the water holes and streams of the state drying up, causing a decline in pasturage and some suffering among livestock.

The consumption of petroleum exceeded production as evidenced by marked declines in stored stocks.

#### RETURN TO PRE-WAR TRADE ROUTES BENEFITS STATE.

The wholesale and retail activity of the state shows 21 per cent larger in value than the year before but with a distinct downward price tendency in drygoods, groceries and shoes. One of the effects of these conditions was expressed in collections where there was displayed a tendency to seek note renewals, and not to take advantage of cash discounts. Some concern was felt for the increasing and very large number of accounts running past due. This was evident in automobile tire concerns, wholesale jewelers, wholesale furriers, wholesale drygoods and wholesale furniture.

One of the most important and expressive developments of the year was that disclosed by our foreign commerce, both import and export. As viewed in the combined totals of both imports and exports there was a marked increase over the totals of the fiscal year 1918-1919, showing that the ports of this state have not suffered because of the return of world shipping to the pre-war trade routes. We received but very little war impetus to our import and export trade, as is disclosed by the fact that while our ports at San Francisco, Los Angeles and San Diego gained in volume and significant percentage since the declaration of the armistice, Seattle lost 32 per cent in the year 1919-1920.

Only a relatively small part of our foreign trade passes through the ports of Los Angeles and San Diego. The bulk of this trade is that of San Francisco and is disclosed in the comparative figures that follow. For the twelve months ending June 30, 1919, the import trade of San Francisco was \$212,558,354; for the twelve months ending June 30, 1920, the import trade of San Francisco was \$252,419,576, an increase of 18.8 per cent. The import trade of Los Angeles for the twelve months ending June 30, 1919 was \$11,043,000.24; for the twelve months ending June 30, 1920, it was \$20,134,261, an increase of 81.3 per cent. The import trade of San Diego for 1919 was included in that of Los Angeles but the import trade for San Diego since March 1, 1920, is represented by \$2,183,661.

The export trade of San Francisco for the twelve months ending June 30, 1919, was \$243,305,066; for the twelve months ending June 30, 1920, it was \$233,654,753, a loss of 4 per cent. For the twelve months ending June 30, 1919 the export trade of Los Angeles was \$8,709,963; for the twelve months ending June 30, 1920, it was \$21,874,125, an increase of 151.1 per cent. The export trade of San Diego for 1919 was included in that of Los Angeles, but from March 1, 1920, its export trade is represented by \$2,543,394. The total import trade of California for the current fiscal year was \$274,737,498; the export trade for the same period was \$258,052,302. California enjoys approximately five-eighths of the import trade of the Pacific Coast and a trifle less than one-half of the export trade of the Pacific Coast.

It is gratifying that the state banks of California are rising to meet their splendid opportunities in the financing of export and import trade. These banks have come to a practical realization of the great importance of the acceptance, and through the medium of participation acceptance credits, which are to play so important a part in the reconstructive period, our metropolitan banks are giving to the banking institutions in all parts of the state an avenue to new profits and new usefulness. While existing erratic movements of the exchange rate make foreign trade transactions extremely dangerous, our state bankers are conservative and well within the limits of safety. They are bringing buyers and sellers together in the development of foreign trade and they are assisting our manufacturers, producers and merchants to enter foreign markets.

As the year closed the inevitable readjustment of the abnormal conditions created by war finance had begun. There was apparent a relief from the dangerous congestion in the transportation which prevented the prompt movement of goods from sources of production to the consumer and forced the banks to accumulate in their pouches loans that should be liquidated. Legitimate and not speculative profits

and a normal turnover in trade must be present objectives. A sharp decline in prices, a reduction in profit and a relaxation in governmental expenditures make very plain the fact that we are being restored to a normal basis of commercial activity.

#### LIQUID BANKING RESOURCES MUST DEVELOP OUR COMMERCE.

This year has seen the first big stride in the development of what has heretofore been the neglected side of state banking in California. The state bank system of California is unique in that it is based upon the departmental theory. The typical California bank has three departments—savings, commercial and trust. Each has its own allocated capital and surplus; each operates under its own law. In effect, the departmental bank consists of three separate institutions under the same roof. The theory has been that in thus allocating the duties of a bank to several separate departments we have added efficiency to each; we have thrown about savings deposits safeguards that could not be set up were those deposits intermingled with commercial assets; we have given the commercial activities of the bank additional freedom and opportunity through relieving them of responsibility for the savings deposit; we have held the sacred trust obligations free from the diverting influences of any other activity of the bank.

While this has been the theoretical result, in practice we are just entering into a realization of the fruits of this theory. Trust business in the State of California, of course, has been practically confined to the state system. Within the last two years national banks have been empowered to undertake fiduciary responsibilities through the medium of trust departments, but these trust departments are fashioned upon and controlled by the state law in each case.

The typical California bank, however, aside from its trust department, has developed as a dual institution: its commercial department, using the word in its broader sense, being operated as a national bank under a federal charter; its savings department, using the term in its broader sense, being a state savings bank operated under a state charter. This relationship of two institutions under different governmental control, but under the same ownership, management and in the same physical premises, was in its inception probably a logical arrangement. It is partly responsible for the conspicuous development of the savings bank idea in California and the comparative neglect of the commercial banking idea in the state system. Because of this emphasis thrown upon savings banking, to the comparative neglect of commercial banking in the state system, the California Bank Act threw about state commercial banking inhibitions which further emphasized this disparity. The theoretical advantage of departmental banking was not borne out

under the California law insofar as the commercial department of state banking was concerned.

The difficulties of regulation and the inconsistencies of such an association are obvious. Since the writer has been Superintendent of Banks, no charter has been issued for the purposes of such an association. The time has passed when such an arrangement is either logical, necessary or efficient. The savings bank development of California is the ultimate basis upon which our finances stand. It becomes an essential thing that this tremendous and growing aggregate of the liquid resources of our people shall not be withheld from the commercial development of our state. That this commercial development shall in no instance expose the savings deposit to the possibility of degeneration is axiomatic; that it can be accomplished with entire safety is equally plain.

Through the amendments to the Bank Act adopted by the last legislature, which, with your sanction, have become effective, we have in considerable degree remedied this situation. Through the exercise of the discretion of this department we have opened other opportunities to the commercial departments of our state banks. It has been our deliberate intention and effort to build up the commercial activities of the state institutions. The tremendous increase in the resources of commercial departments in the past few months is the first fruit. It remains for us, through appropriate legislation, to remove the remaining obstacles in the way of the development of commercial banking in our state system, to the end that the state bank may in all fields be at least an equal competitor with the national bank. To this end a series of amendments will be presented to the 1921 legislature, which I trust shall have your entire approval and support. These amendments will not only remove the shackles on the commercial departments of our state banks, but will also open wider opportunities for commercial support from the savings banks.

#### HOUSING PROBLEMS AND LONG-TERM FINANCING.

The first and foremost duty of the savings bank is to handle long-term financing incident to the development and improvement of the land, whether it be agricultural through our fertile valleys or home sites or business sites within our towns and cities. A very conspicuous development, however, has characterized the past few years in the savings banks of California. Due to the tremendous prosperity of our state, mortgage loans of every sort have been retired in very large number. During the past year or two there has been a dearth of acceptable mortgage loans. During this interval savings bank

deposits available for loans have tremendously increased. As a natural result of this decrease in the quantity of acceptable mortgage loans and increase of savings bank resources, we find that while in 1914, 64 per cent of the resources of savings banks were invested in real estate loans, in 1920 only 47 per cent was so invested. This points unerringly to the necessity for a wider field for savings bank investment and activity. Within the discretion of this department, through the certifying of bond issues and otherwise, we have undertaken insofar as we may to meet this need; we shall ask the legislature for such amendments as shall make further conservative development possible.

In this connection an additional remark is apropos. The housing problem is still with us. As our population has increased it has, due to the war conditions and high costs, run far ahead of our housing facilities. It may be that this problem will be brought before the coming legislature. Should this be the case, the remedies, if any, that are suggested should be such as to run no risk of creating other ills more trying. I say without reservation, that the savings banks of California have given full and loyal support to every legitimate building movement. This department has found it necessary not to urge the building loan, but to confine it within a reasonable valuation and upon a basis of rapid amortization for the safety and protection of our banks. There is no need or excuse in California for legislation designed to coerce the savings bank in this regard.

I am moved to voice this thought by the situation existing in the State of New York, where a special session of the legislature has been called to consider the housing problem. An attempt is being made by legislation to require that the savings banks of New York invest a fixed percentage, as a minimum, of their resources in real estate loans; and to deprive the New York savings banks of the right of handling bankers' acceptances within the small limitations now granted them by law. I submit that this is backward-looking legislation, designed to create a much graver peril in the savings banks of New York than the ill which it professes to cure. Safety is the first consideration in the savings banks of California. It should be our joint obligation to protect them from any such tinkering legislation.

#### STATE BANK MEMBERSHIP IN FEDERAL RESERVE SYSTEM.

For the first time in their career, our commercial banks and the commercial departments of departmental banks have asserted their proper place in the commerce of the state. They have increased their capital and surplus that they may undertake larger operations. Their resources have mounted to an unparalleled aggregate. They are widening their fields of activity until they challenge the supremacy of the

national banks which has been held so long. So rapid and so sure has been this progress that the national banks are facing stern competition.

Two outstanding forces have accomplished this result. The first is the liberalization of the Bank Act of California to permit state banks to compete fairly with their national rivals and by membership in the Federal Reserve Bank of San Francisco to function upon a parity with national banks, and the second is the well defined and quickly growing tendency of national banks in California to enter the state system.

In 1913, before the Federal Reserve Act became law, the Bank Act of California was amended to permit the banks of the state system to acquire membership in any federal banking system that might be created. Our act, however, was not amended in such fashion as to make that membership of positive, practical value, as state banks in entering the system and remaining subject to the state law would suffer a serious disadvantage in competition with national banks. While permission was granted, no movement looking toward membership in the federal reserve system followed because of the inequalities that necessarily would ensue.

When the federal reserve system became a reality, the bankers of California recognized its tremendous advantages in centralized reserves, elastic currency and the very essential privilege of rediscounting. Our bankers were heartily in accord with the demands of the federal government for gold, and while membership was not indulged, our gold was very freely given.

Our bankers recognized the strength given by the federal reserve system to the financial, industrial and commercial activities of the nation, particularly in the accomplishments of a mobilization of reserves. The increased security, greater ability to grant accommodation and the capacity to rediscount were accepted as avenues of sound banking practice, but the peculiarities of our state system could not, without amendment, warrant membership by our banks in the federal system.

We desire that mobilization of reserves which gives to the banks a resistance against the shock of financial panic. We knew the evils of a pyramiding of reserves under the old system. We wanted the insurance of needed funds by the rediscounting privilege and we were eager to have such paper as would be eligible for rediscount by the Federal Reserve Bank, but we could not accept these privileges until the immense disadvantages of membership under the then existing law had been removed.

It was necessary that our act be amended to modify the state requirements for reserves, to permit a wider scope on the part of savings banks in the acquisition of eligible paper for rediscount, and to provide for our commercial banks a wider field for the turnover of their funds.

With these objectives in view, certain amendments to the Bank Act were presented to the legislature in 1919 and I am very grateful that I am able to report that the amendments suggested have become law. Our reserve requirements have been modified, both in the commercial and in the savings departments, to place member banks upon an actual parity with national banks in this important element of their affairs. Both commercial banks and commercial departments of departmental banks and savings banks and savings departments of departmental banks are permitted now to rediscount those available liquid assets that in 1917 they were permitted to purchase or discount. Savings banks have a practical interest in the federal reserve system, although it is essentially a commercial system, by being allowed to rediscount their bankers' acceptances and commercial paper.

#### **IMMENSE STATE BANK CONTRIBUTION TO OUR BANKING POWER.**

Through these changes in our law membership in the Federal Reserve Bank of San Francisco became for our larger and more significant institutions a reality. These banks seized the opportunity to place themselves upon an equality with national banks and to exercise in our world of finance that important part which their standing and their immense resources commanded them to play. The result has been that a tremendous aggregate of state banking resources has been added to the commercial banking power of the state, and our state banks for the first time in their history are financing our trade and adding to the national banking resources an immense fund which contributes to the prosperity and the growth of our manufacturing, mercantile and industrial life. Our banks now can carry a scientific reserve composed of liquid, rediscountable commercial paper. They are educated to the requirements of the new and modern system of finance established in our commercial life by the federal reserve system. They are basing their operations upon their capacity in the last analysis to rediscount and thus they demand from borrowers such security or such evidence of credit as will pass the strictest scrutiny of the rediscounting authorities. Our banks have great ability to grant accommodations because of their own capacity to rediscount. Facilities for the transfer of funds of check collection have been improved by this membership in the Federal Reserve Bank of this

district. The reserve of these banks is always available in the Federal Reserve Bank and it is a real reserve that may be drawn upon when necessity calls. All of these advantages, together with the peculiar and distinct privileges of the state system itself, have given to our banks a standing that is being reflected in the tendency of the national banks to remove themselves from the national system and enter that of the state.

The figures with relation to the membership of state banks in the Federal Reserve Bank of San Francisco are eloquent in their reflection of the enthusiasm with which state banks seized the opportunity to become members of that system. Up to June 30, 1919, only four state banks of California had become members of the Federal Reserve Bank of this district. Only a capital of \$825,000, a surplus of \$341,500, and total assets of \$8,606,282.01 represented the participation of the banks of California in the new and modern system of finance that followed the creation of the federal reserve system. One year later thirty-five banks of California with a total capital of \$28,126,100, a combined surplus of \$14,411,100 and an aggregate of \$579,073,473.85 in assets, had become members of the Federal Reserve Bank of San Francisco and had added the tremendous force of their banking power to the financial machinery of the state.

This movement toward membership is not yet at its peak. Since June 30, 1920, and up to and inclusive of September 8, 1920, other banks have entered into membership and the aggregate that now represents California's participation in the federal reserve system is in capital \$33,996,200, in surplus \$16,892,531.37, and in assets \$627,836,677.26. It is very interesting to observe that in the subscription of these banks to the stock of the Federal Reserve Bank of San Francisco the savings banks or savings departments of departmental banks of California have contributed \$1,034,500 and the commercial banks or commercial departments of departmental banks have contributed only \$167,250, clearly indicating the splendid response of our savings banks to the appeal for the centralization which is of such benefit to them as well as to commercial banks.

There are now thirty-seven banks of California in the federal reserve system and others are actively planning to enter. Within a very short period it is settled that approximately \$50,000,000 in assets will be added to the formidable array that now represents California's participation in modern, mobilized, rediscount financing.

#### CONVERSION OF NATIONAL BANKS TO STATE SYSTEM.

The second source which has contributed to the very remarkable growth of the commercial side of the state banking system, is that represented by the action of large and influential national banks in the state abandoning the national system and entering that of the

state. This movement began with the fiscal year under discussion. It has progressed regularly and with deliberation. It assures greater accretion to the banking power of the state system and it holds forth the promise of an extraordinary development not contemplated by the creators of the federal reserve system itself. When the Federal Reserve Act became law it was freely predicted that state banks would find conversion the natural outcome of their progressive activity. In California it has been the reverse and national banks are giving up their charters in the national system and accepting the increased privileges and broader activity offered by the banking laws of this state. During the fiscal year from June 30, 1919, to June 30, 1920, national banks having an aggregate capital of \$1,010,000, surplus of \$505,000, and assets of \$21,376,000, entered the state system through the agency of purchase and sale agreement. From June 30, 1920, to September 8, 1920, national banks having a capital of \$2,900,000, a surplus of \$1,120,000 and assets of \$35,334,050.76 entered the state system through the same medium. We have therefore an aggregate accretion to the state banking system through the agency of acquired national banks during the period from June 30, 1919, to September 8, 1920, of capital \$3,910,000, of surplus \$1,625,000, and of assets of \$56,710,050.76. From this must be subtracted the capital, surplus and assets of state banks that converted into national banks during the same period. In the fiscal year from June 30, 1919, to June 30, 1920, state banks having \$800,000 in capital, \$694,847 in surplus and \$9,543,927.92 in assets converted into national associations. In the period from July 1, 1920 to September 8, 1920, state banks having a capital of \$177,500, surplus of \$62,000 and assets of \$2,556,405.58 also converted, giving us for the period from June 30, 1919 to September 8, 1920, an aggregate of converted state banks into national banks with capital of \$977,500, surplus of \$756,847 and assets of \$12,100,333.50.

The net increase in state banking power from this source therefore was, capital, \$2,932,500, surplus \$868,153 and assets \$44,609,717.26.

#### COMBINED BANKING POWER OF STATE BANKS.

The banking power of California, as expressed in the combined assets of the national and state institutions as of date June 30, 1920, is \$2,440,487,000. Of this tremendous aggregate the assets of the state banks are \$1,402,360,000 and the assets of the national banks are \$1,038,127,000, giving an excess of assets in the state banks over those of the national banks of \$364,233,000.

In the state banks the increase in assets for the fiscal year under discussion as compared with the preceding fiscal year was \$272,926,544.75.

The aggregate of loans and discounts in the state banks as of June 30, 1920, was \$772,213,880.41, an increase of \$164,426,091.44. The

aggregate of loans in the state banks is greater than that of the national banks resident in California by the immense sum of \$249,053,000.

The aggregate of individual deposits in the state banks of California on June 30, 1920, was \$1,175,291,422.33, an increase of \$227,958,001.48. The aggregate of deposits in the state banks of California is larger than the aggregate of deposits in national banks in this state by the sum of \$545,842,000. The total number of depositors, both commercial and savings, in the state system as of date June 30, 1920, was 2,005,260.

I have made it the policy of this department to recognize no dead line between the state banks and the national banks of California. Both are integral parts of the same financial situation. Neither can prosper or suffer without an immediate corresponding effect on the other. Each has its proper field and function. Without either the situation would be incomplete. Neither can suffer without the other sharing in the penalties—both are parts of one and the same integral financial situation.

The State Banking Department of California is concerned with every situation that affects the finances of this state, and the facilities of this department and its cooperation are open to every national bank in California quite as freely as to the institutions subject to our jurisdiction, and the national banks of California accept that point of view and avail themselves of it. We have the broader thought of the interests of the people of the State of California rather than the narrower view of the responsibilities of this department.

This department has offered its sincere cooperation to the Federal Reserve Bank.

I desire to voice my appreciation of the relations between the department and the Federal Reserve Bank of San Francisco. Cooperation here has been very real, and I think effective. We have made numerous joint examinations—the information of each has been open of access to the other. In no particular has there been other than the most harmonious relations.

I also attended the nineteenth annual convention of the supervisors of state banks at Seattle. It seemed well to keep in touch with the development of thought in banking departments of all of the states.

While the high level of prices has left its mark upon the balance sheets of our commercial banks and the commercial departments of departmental banks the figures also disclose the very vital fact that these banks have moved with care and their assets are invested in short time loans and quick, easily realizable securities.

Our bankers have resisted that form of inflation which finds its expression in the lengthening of the terms of credit and consequently

in the gradual development of a non-essential character in the loans of the institution. Our bankers have been sound in watching and insuring slow paper, at the same time giving every encouragement in the making of new and essential loans. The ability to liquidate in cash has been accepted as the first test of essentiality, and while the Federal Reserve Board has persistently refused to define essential loans, our bankers have been extremely conservative, with the result that their problems of liquidation are not comparably as great as those of the banks of the national system.

#### **TREMENDOUS GROWTH OF STATE COMMERCIAL BANKS.**

At the close of the fiscal year our commercial banks and the commercial departments of departmental banks had in their pouches an aggregate of \$267,519,547.81 in loans, an increase of \$90,625,832.21 during the year, as compared with an increase in commercial loans of \$21,367,297.10; the very remarkable expansion of the loaning capacity of our commercial banks is self-evident.

During the fiscal year our commercial banks and commercial departments of departmental banks uttered their acceptances only in the aggregate of \$4,000,000. Compared with the national banks in California, this is a small aggregate and is due primarily to a resident disadvantage in our law. This I hope to have remedied by the presentation of an amendment to section 80 of the Bank Act which will place our banks equally upon a footing with the national banks and open to them opportunities that they now enjoy only under certain unnecessary difficulties. The true acceptance, that which represents the financing of goods sold, is the highest type of credit instrument, mobile to the last degree and offering the best use of credit. I feel very confident that our commercial banks will utilize it to their fullest extent and without the abuse which in certain parts of the United States has crept into this business.

During the year our commercial banks and commercial departments of departmental banks increased their holdings in bonds, warrants and other securities in the sum of \$5,160,013.94, giving these banks an aggregate holding of \$59,146,724.71. This very largely represents war paper and as such involves an element of inflation. It is a necessary present evil in our financial system, but our bankers are fully aware of its character and are eliminating it as rapidly as circumstances permit.

It is noteworthy that our commercial banks have to their credit eleven and one-half millions of dollars with the Federal Reserve Bank of San Francisco. They have reduced their overdrafts in a very material sum. They have decreased their holding of bank premises, transferring

this slow asset to their savings department. They have eliminated considerable part of other real estate. They have increased their capital that they may observe that provision of our law which establishes a relationship of ten per cent between capital and surplus on the one hand and deposit liability on the other. There is a large increase in bills payable, but the major part of it is with the Federal Reserve Bank and represents one of the exigencies of inflated finance. The relation of our commercial banks to the Federal Reserve Bank is healthy.

During the year the assets of our commercial banks and the commercial departments of departmental banks increased \$108,384,800.75. Since June 30, 1920, to and including September 8, 1920, the assets of our commercial banks and of the commercial departments of departmental banks have increased \$62,846,084.93, giving a total increase for the period from June 30, 1919, to September 8, 1920, of \$171,230,885.68.

During the fiscal year from June 30, 1919, to June 30, 1920, the deposits in commercial banks and commercial departments of departmental banks increased \$72,370,631.21. Since June 30, 1920, to and including September 8, 1920, the increase has been \$44,972,767.83. The total increase in deposits, therefore, from June 30, 1919, to September 8, 1920, is \$117,343,399.04, the most unusual increase for such a period in the history of the commercial banks and the commercial departments of departmental banks in California.

One of the most remarkable characteristics of the condition of the commercial banks and commercial departments of departmental banks in California is the increase in depositors. During the year this increase was 89,105. During the preceding year, namely, the fiscal year from June 30, 1918, to June 30, 1919, there was in the commercial banks and in the commercial departments of departmental banks in California a loss of 12,620 depositors. Since June 30, 1920, to and including September 8, 1920, there has been an additional increase of depositors of 17,229, giving a total for the period from June 30, 1919, to September 8, 1920, of 106,334 depositors, which speaks very clearly of the expanding influence of the commercial banks of the state in the essential activities of financial, industrial and mercantile life. On June 30, 1920, there were 575,865 depositors in the commercial banks and commercial departments of departmental banks of California, and on September 8, 1920, there were 593,094 depositors.

These facts and figures, summarized and tabulated, are as follows:

Commercial Banks and Commercial Departments.

	June 30, 1919	June 30, 1920	Increase	Decrease
<i>Resources—</i>				
Loans	\$176,893,715 60	\$267,519,547 81	\$90,625,832 21	
Overdrafts	1,033,009 42	812,536 61		\$270,472 78
Customers' liability account of drafts paid under letters of credit		144,194 05	144,194 05	
Liability of customers and foreign banks and bankers' account of acceptances executed by or for account of bank		4,008,300 58	4,008,300 58	
Bonds, warrants and other securities	53,986,710 77	59,146,724 71	5,160,013 94	
Stock of Federal Reserve Bank		167,250 00	167,250 00	
Bank premises, furniture and fixtures, safe deposit vaults	12,080,856 27	10,482,674 62		1,598,181 65
Other real estate owned	1,015,527 20	521,461 13		494,066 07
Due from banks	45,847,908 25	43,973,367 95		1,874,540 30

**SAFETY AND LIQUIDITY DOMINATE OUR SAVINGS BANKS.**

While the commercial banks and the commercial departments of departmental banks of the state system made such amazing growth during the fiscal year, this development in no way disturbed the pre-eminent fact that our savings banks and our savings departments of departmental banks are the controlling institutions of the state system. These savings institutions remain as one of the greatest of their kind in the world. Our people have been astoundingly thrifty during the year and not a single gain in the commercial banks or the commercial departments of departmental banks has been at the expense of the savings banks or of the savings departments. The line of demarcation has been maintained strictly and there has been no invasion or perversion of savings bank principles in order that the commercial side of our system should expand.

Our savings banks and the savings departments of departmental banks have increased enormously during the year in assets, loans and deposits.

Two highly important objectives have been constantly in the minds of our savings bankers: One, to give care, courage and assistance to the development of the state in that aspect which requires long time investments, and the other to provide for the banks a literal secondary reserve, invested in bankers' and trade acceptances and commercial paper. The facts and figures with relation to these two very vital elements of savings banking are the most astonishing in the history of savings banks in California. While these banks have met their obligations to the investing and home-building public, they have contributed with very remarkable success to the liquidity of their own affairs, to their profits and to the advantage of industrial enterprises by a judicious and widespread investment in short time, self-liquidating paper.

It will be remembered that California was the pioneer in permitting its savings banks to acquire the soundest of secondary reserves, namely, self-liquidating paper. This experiment has been followed in the leading state jurisdictions of the East and Middle West and uniformly with success. California's triumph in this regard has been highly commended. The savings banks of this state have become the market for the prime, short time paper of the United States and our statistics demonstrate the fact that our bankers are extremely careful and critical in their investments in these particular securities.

The acceptance of the privilege granted to savings banks and to savings departments of departmental banks to invest in bankers' and trade acceptances and in commercial paper of the kind so strictly characterized and limited by the Bank Act has been striking. On June 30, 1919, the total investment of our savings banks in bankers' acceptances and trade acceptances was \$3,027,870.36. On June 30,

1920, this investment reached the aggregate of \$9,501,854.22, an increase of \$6,473,983.86. On September 8, 1920, the aggregate holding of bankers' acceptances and trade acceptances was \$12,850,063.09, an increase in seventy days of \$3,348,208.87, making a gross increase from June 30, 1919, to September 8, 1920, of \$9,822,192.73.

This fact possesses a double meaning because in association with the figures that establish the investment of savings banks and savings departments of departmental banks in commercial paper the tendency of our bankers to invest in bankers' and trade acceptances rather than in commercial paper is pronounced. It is apparent that the safer and better credit instrument is receiving the patronage of our savings bankers.

#### SAVINGS BANK RESERVES IN SELF-LIQUIDATING PAPER.

On June 30, 1919, savings banks and savings departments of departmental banks had an investment of \$10,527,810.57 in commercial paper. On June 30, 1920, these banks had an investment in commercial paper of \$33,260,288.29, an increase of \$22,732,477.72. On September 8, 1920, the savings banks and savings departments of departmental banks had an investment in commercial paper of \$28,603,794.32, a decrease of \$4,656,493.97 in commercial paper as compared with an increase of \$3,348,208.87 in bankers' and trade acceptances in the seventy days following the close of the fiscal year.

These facts record with what care, discretion and discrimination our savings banks are watching their investments in commercial paper in order that they may not be involved in the evil consequences of those elements of inflation that are necessarily resident in commercial paper at this time.

Within the authority of the Bank Act, savings banks and savings departments of departmental banks have capacity to invest twenty per cent of their aggregate deposits in bankers' acceptances, trade acceptances and commercial paper. On June 30, 1920, these banks therefore had capacity to invest in these credit instruments \$171,624,430.10. They had invested on that date \$42,762,142.51. These figures are illustrative of several very pertinent facts. On June 30, 1919, there were only fifty-six savings banks or savings departments of departmental banks that had invested in bankers' and trade acceptances and commercial paper. On June 30, 1920, there were one hundred and thirteen banks so investing, an increase for the year of fifty-seven investing banks. On June 30, 1919, two hundred and seventy-seven savings banks and savings departments of departmental banks did not invest in bankers' and trade acceptances and commercial paper. On June 30, 1920, this had been reduced to two hundred and twenty-one banks.

It is of interest also to note that the percentage of holdings of bankers' acceptances, trade acceptances and commercial paper to the total resources of the holding banks was on June 30, 1919, 3.4 per cent. On June 30, 1920, the percentage was 6.2. The percentage however of the total holdings of bankers' and trade acceptances and commercial paper to the total resources of all of the savings banks and savings departments of departmental banks in the state system was on June 30, 1919, only 1.8 per cent. On June 30, 1920, this percentage had increased only to 4.5 per cent. The margin therefore for the development of this very admirable investment is very large and in its maximum expression will be completely within the limits of sound, safe and conservative savings banking.

While our savings banks have so materially increased their investment in bankers' and trade acceptances and commercial paper, these investments have been only for short periods and represent a profitable turnover of idle money pending their investment in long-time securities. These investments have in no fashion mitigated against the performance of that duty which our savings banks hold to the development of the natural resources of the state and to the meeting of that obligation for new homes and new housing facilities which is so insistent at this time. The record of the year with reference to the loans on real estate made by savings banks and savings departments of departmental banks is very gratifying.

On June 30, 1919, the savings banks and savings departments of departmental banks in the state system had invested in real estate loans an aggregate of \$390,783,051.21. On June 30, 1920, the same banks had invested in real estate loans an aggregate of \$444,142,955.72, an increase of \$53,359,904.51 for the fiscal year. From June 30, 1920 to September 8, 1920, there has been an additional increase in real estate loans in these banks of \$6,476,511.53 making an aggregate increase for the period covered of \$59,836,416.04.

This is the greatest yearly increase in more than six years in real estate loans. It reflects the attitude of the savings bankers toward their duty to meet the housing problem of the state.

During the war the savings bankers of California hesitated to loan money upon real estate security. It is interesting therefore to note the development of real estate loans from June 30, 1914 to September 8, 1920. On June 30, 1914, the savings banks and savings departments of departmental banks had an aggregate of \$327,777,187.40 in real estate loans, which was 94 per cent of all of the loans in these institutions and 64 per cent of their assets. On June 23, 1915, these institutions had \$334,898,656.04 in real estate loans which was 94 per cent of their total loans and 64 per cent of their total assets. On June 30, 1916, these institutions had \$361,283,598.95 in real estate loans which was 93 per cent of their total loans and 61 per cent of

their assets. On June 20, 1917, these banks had \$393,485,787.76 in real estate loans which was 95 per cent of all of their loans and 59 per cent of their total assets. On June 29, 1918, these banks had \$398,278,730.14 invested in real estate loans which was 94 per cent of their total loans and 56 per cent of their total assets. On June 30, 1919, these banks had invested in real estate loans \$390,783,051.21 which was 89 per cent of their total loans and 50 per cent of their total assets. On June 30, 1920, these banks had invested in real estate loans \$444,142,955.72, which was 81 per cent of all their loans and 47 per cent of their total assets.

The increase in assets of the savings banks and savings departments of departmental banks from June 30, 1919, to June 30, 1920, was \$163,931,262.21 as compared with an increase during the year 1918-1919 of \$74,765,798.22.

#### **SAVINGS DEPOSITS INCREASE ONE HUNDRED FIFTY-FIVE MILLION.**

During the fiscal year that closed June 30, 1920, deposits in savings banks and savings departments of departmental banks increased in the remarkable aggregate of \$155,587,370.27 as compared with an increase of \$66,854,053.26 during the fiscal year 1918-1919. When we keep in mind that this increase in deposits has not the same relation that an increase in deposits in a commercial system with the inevitable inflation expressed in a corresponding increase in loans, the fact is eloquent of the wonderful faith of the people of California who now have aggregate deposits in their savings banks of \$858,122,150.50. This is an average deposit of \$600 and a per capita deposit of more than \$221.

During the year 181,943 new depositors started new savings deposits as against a net gain of 39,434 depositors during the fiscal year 1918-1919. On June 30, 1920, there were 1,429,395 depositors in the savings banks and savings departments of our departmental banks.

The increase during the year of savings bank loans indicates perhaps as well as any statistical information the unusual progress of these institutions during the period under discussion. In the year from June 30, 1919, to June 30, 1920, savings bank loans increased in an aggregate of \$74,134,843.52, as compared with an increase during the fiscal year 1918-1919 of only \$2,312,561.12. The aggregate of loans in the savings banks and savings departments of departmental banks on June 30, 1920, was \$502,368,199.69. Added to this was an increase in bond holdings of these institutions of \$49,157,060.97, giving an aggregate of \$274,812,353.89 in bonds, and other securities, all strictly limited as to value and characteristics.

Contributing favorably to the liquidity of these banks was their holding represented by the item, due from banks, in an aggregate of \$54,385,160, an increase of \$4,072,057.67 over the preceding year.

The life of the savings banks of this state during this period of readjustment, reconstruction and uncertainty expresses the purpose of these institutions to be eminently in a position to meet any emergency. These banks maintained an aggregate on June 30, 1920, of more than thirteen million with the Federal Reserve Bank of San Francisco. They have increased their cash on hand, their capital and their surplus. The increases in capital and surplus were to meet that requirement of the law which establishes a fixed relationship as between capital and surplus on the one hand and deposit liability on the other. These institutions have set up reserves for interest, taxes and expenses. They are making a very liberal use of the public moneys of the state. They have invested in United States certificates of indebtedness. They have played well their part toward the people who trust them and toward the state that licenses them.

Compared with the report of June 30, 1919, the condition of the savings banks and the savings departments of departmental banks of the state system at the close of business on June 30, 1920, expresses the following facts:

## Savings Banks and Savings Departments.

**STATE AND NATIONAL TRUST COMPANY SUCCESS.**

The same notable elements of success that have attended the activities of savings banks and commercial banks of the state system are evidenced in the facts and figures that tell the story of the trust companies and the trust departments of departmental banks for the year. These institutions, which are strictly and exclusively of a fiduciary nature, have increased their capital and surplus to meet new obligations. Their assets have become measurably greater and as an evidence of the public faith in their operations their trust assets during the year increased in the splendid aggregate of \$38,739,733.66, an increase of more than 50 per cent. These institutions now have in court trusts and in private trusts that for purposes of supervision and visitation are designated as court trusts, an aggregate of \$110,500,362.33. Of this sum \$14,942,872.42 are private trusts that by the initiative of the creators of these trusts have been taken out of the category of private trusts and placed in that of court trusts in order that they may have the advantage of state supervision. In this class of business of the trust companies there was an increase of \$3,412,506.79 during the year.

The privileges of these institutions are very attractive and as a consequence of national legislation that permits national banks to establish trust departments there are now ten national banks in California equipped with trust departments. Nine of these qualified during the fiscal year ending with June 30, 1920, and one since then.

These trust departments of national banks are under the supervision of this department as far as their court trust business is concerned. These institutions have not yet developed a large business, as they must obey the law of their progress, which is slow. National banks have set aside \$1,417,411.48 for the conduct of trust company business and they now have trust resources of \$1,644,733.22. Their private trust business is not within the observation of this department as they operate under the same law as state trust companies which are exempt from supervision with reference to their private trust business. This business in the state trust companies reaches an enormous aggregate.

Compared with the report of June 30, 1919, the condition of trust companies and of trust departments of departmental banks of the state system at the close of business on June 30, 1920, expresses the following facts:

## Trust Companies and Trust Departments.

	June 30, 1919	June 30, 1920	Increase	Decrease
<b>Resources—</b>				
Loans	\$2,630,717 20	\$2,326,132 91		\$304,584 29

Fund for advances to court trusts		99,063 41	99,063 41	
Other liabilities	106,497 20	47,479 58		59,017 62
<b>Totals</b>	<b>\$10,440,857 91</b>	<b>\$11,051,339 70</b>	<b>\$790,157 06</b>	<b>\$179,675 27</b>

During the year our state banks increased their capital in the sum of \$12,155,049.02, giving an aggregate of capital for the state system of \$84,187,953.96. During the year there was an increase in surplus of \$5,526,910.53, giving the total of surplus for banks in the state system of \$38,682,530.22.

At the close of business on June 30, 1920, there were 420 state banks with 167 branch offices. Of these banks, 78 are commercial institutions, 106 are savings banks, 8 are trust companies, 202 are commercial and savings departmental banks, 22 are commercial, savings and trust banks and 4 are savings and trust company banks.

All of our institutions have responded freely to that requirement of the law that demands the fixed relationship as between capital and surplus on the one hand and deposit liability on the other, and during the fiscal period under consideration 65 banks increased their capital.

The law requires that a called report of condition shall be asked of all of the state banks at least three times coincidentally with the call made upon national banks. This duty was performed and in addition thereto an additional call was made. These calls were as of date September 12, 1919; December 31, 1919; March 31, 1920, and June 30, 1920.

Fifteen new banks were organized during the fiscal year. Of these, four were commercial banks, two were savings banks, eight were commercial and savings banks and one was a commercial, savings and trust company bank. Forty new branch offices were licensed during the year and forty licenses were granted to collect school savings from the pupils in private and public schools. This feature of our banking has met with the highest measure of success and it is inculcating habits of thrift among the children of the state.

In response to locality needs banks added new departments to their business. The aggregate of these departments was fifteen, five of which were commercial, nine savings and one trust company business. Four branch offices voluntarily were closed during the period.

One of the interesting developments of the year was the consolidation of large and prosperous banking institutions into larger and more efficient units. Through this process six state banks became extinct and were merged into new institutions more adequately conditioned to meet the needs of their contributory territory.

Compared with the report of June 30, 1919, the condition of state banks at the close of business on June 30, 1920, as expressed in a combination of the assets and liabilities of savings, commercial and trust company departments, discloses the following facts:

## Combined Statement of Condition of State Banks.

	June 30, 1919	June 30, 1920	Increase	Decrease
<b>Resources—</b>				
Loans	\$607,787,788 97	\$772,213 880 41	\$164,426,091 44	
Bankers' acceptances and notes, drafts or bills of exchange	13,555,680 93	42,762,142 51	29,206,461 58	
Overdrafts	1,083,009 42	812,536 64		\$270,472 78

## IRRIGATION DISTRICTS IN RELATION TO STATE BANKING DEPARTMENT.

The Superintendent of Banks is by virtue of his position a member of the Irrigation District Bond Commission, the other two members being the Attorney General and the State Engineer. This commission has to do with the formation and financing of the irrigation districts under the laws of California. No small part of the thought and activity of the Superintendent of Banks during the past two years has been directed to the consideration of irrigation district procedure.

It should be remembered that the development of irrigation districts under the present law has gone from small beginnings to a tremendously large aggregate. The problems incident thereto have grown in proportion and assumed quite a different aspect in their greater stature than anything contemplated when the law was devised.

The presence of the Superintendent of Banks upon this commission is largely due to the thought that irrigation district bonds issued for accepted purposes by duly authorized and organized districts are automatically legal investment for savings banks. The aggregate of the bonds so issued and now outstanding is in excess of thirty-five millions of dollars, with very large additional financing in sight.

It becomes increasingly necessary therefore that the irrigation districts should be upon a sound basis. A discussion of their problems as they touch this department comes naturally under two heads:

1. Those that involve the policy and the physical conditions of the districts; and
2. Those that have to do with their financing.

We have just passed through an abnormally dry season, a culmination of several dry seasons and an accompanying shortage of water. While we may look upon this situation as abnormal, as indeed it is, it gives us an accurate foretaste of what the normal situation may be within the next few years, as the intensive cultivation of our valley lands progresses. This season, with its difficulties, will have been very much worth while if it directs our attention to an efficient program to meet the problem well in advance of its becoming chronic.

This program is inseparable from a comprehensive consideration of the entire water problem of California. An arch over the entrance of the business district of the city of Modesto bears this inscription: "Water, wealth, contentment, health."

The thought is very aptly put—water, properly translated, means wealth, contentment, health, in California. Due to our long arid summer season without water intensive agriculture is an impossibility.

But agriculture—irrigation—is not the sole work for water to do in California. We have no available coal supply of any considerable moment. Our supply of crude oil for fuel purposes no longer marches

apace with the demand. While southern California has developed natural gas the development is local and not permanently dependable. Our recourse in California must be to hydroelectric development—the harnessing of our water.

Unfortunately, to date, our various water problems in California have been handled in the main by separate groups of people for separate purposes, each without consideration for the other problems involved.

Domestic water supply has been conserved and utilized with very little reference to irrigation, hydroelectric development, etc. Irrigation projects have been developed largely with the thought of that utility alone. Our flood control projects have been handled upon the theory that the problem was solely to lead the flood waters of the state harmlessly and quickly from the mountains to the sea.

In the necessary development of our irrigation projects we are now entering upon a new era—the closer, cheap, available sources of water for irrigation purposes have been largely tapped and utilized. For our additional development we must build upon more ambitious plans at a very much increased cost. Precisely the same thing may be said of the hydroelectric developments.

Not only is the question of water to be considered, but the question of money—the hydroelectric development alone indicating that they will need upward of three hundred million dollars of new money for necessary development in the next ten years.

If you will permit me to dogmatize, let me say that there is neither sufficient water nor sufficient money available in California to meet these several needs separately. The time has come when we must look upon our water—none too plentiful—as an asset to be used in every possible fashion. Our problem of the future is to take control of every drop of water and every flake of snow in the high Sierra, to conserve, control and utilize that water to the end that it may meet all of these problems before, in its orderly march, its remnants shall reach the sea. This requires a comprehensive survey of the entire situation. It will require tremendous financing to which the faith and credit of the state must be loaned. It is the outstanding problem of California development of the next decade.

It has become increasingly and patently necessary for the Irrigation District Bond Commission to exercise a supervision and control over the affairs of irrigation districts formed and financed under its direction. The members of the commission are a unit in advancing the thought that this commission, or such other supervising body as may hereafter be established, should have increased powers of examination, supervision and direction, and a reasonably adequate fund for this purpose. Procedure through the districts must be standardized,

proper systems of accounting, that the district may know its costs, must be established, competent engineering assistance must be given. These are things that run, not only to the inherent needs of the districts themselves, but to the safeguarding of the credits already advanced to them through the form of bond issues.

#### FINANCING OF STATE IRRIGATION DISTRICTS.

The California irrigation district law establishes that districts may borrow under fixed conditions through the medium of bond issues having a maturity of forty years and payable in installments between the twenty and forty years. Districts quite generally have assumed that this twenty- and forty-year practice was meant as a standard rather than to establish a limitation of financing. Until recently therefore no real consideration has been given to the financial problem of the individual districts with the thought of fitting its financial program to that problem. The theory of delayed maturities, of course, has been to provide for the intensive development of the districts in the form of vine or tree culture, requiring years of development before the peak of income is reached. In more recent years, however, other forms of development have contradicted the theory. The most notable of these have been the districts in the Sacramento Valley, largely given over to the culture of rice. In this form of development the peak of earning capacity is probably reached not later than the second year and the need for delayed financing is by no means apparent. It may be arbitrarily said that to predicate a forty-year bond issue upon rice development is not sound finance.

In certain of the older districts they have required several bond issues—the invariable practice of delayed maturities has very seriously disturbed the finances of the district, leading to a very uneven and illogical tax burden over the years.

It has therefore recently become the practice of the Irrigation District Bond Commission to undertake to establish maturities in district financing which shall soundly meet the needs of each borrowing district. Our purpose has been not to establish either short term or long term financing, but to work out a scheme of financing in each instance that meets the specific situation, to ask the borrowing district to assume a maturity no later than the demonstrated earning capacity of the district may reasonably meet without undue burden and without hampering the district's development. Three things are being accomplished in this manner:

1. Discriminating buyers of irrigation bonds can not but regard the situation as strengthened from the standpoint of the investor.
2. Districts are saving large sums of money which would otherwise be expended in interest over longer periods than the capital is needed.

3. We are able to make the available funds for investment in irrigation bonds cover more development.

Unless this process can be efficiently carried forward and unless the efficiency of the internal affairs of the districts can be assured in the fashion heretofore recommended or in some other equally acceptable fashion, then irrigation district bonds should not be automatically legal investment for savings banks, but should be subject to specific certification based upon specific inquiry.

#### BOND INVESTIGATIONS.

##### Real Estate Bonds.

During the six-year period ending June 30, 1919, the State Banking Department investigated and certified forty-six real estate bond issues, totaling over thirty-two million dollars. Within the twelve months ending June 30, 1920, forty-six real estate issues were certified, having an aggregate total par value of thirty million dollars. Since the end of the fiscal year up to date thirteen additional real estate issues have been certified with a total par value of nearly seventeen million dollars.

This function has become one of the most important within the department. Through the medium of land bonds the larger agricultural enterprises of California are now being carried forward. The department invites the prospective borrower to bring his financing problem to us. Across the table with the borrower we analyze and study it. Adequate appraisals by competent investigators are made in the field. In the end, if the project be worthy, a financing program fitted to its needs and at the same time meeting the requirements of the savings banks is arranged. In these days of inflated values and of tremendous income producing power the question of actual value as security over a period of years is uppermost.

The three usual methods of establishing valuation—

- (a) costs;
- (b) market price of this or similar properties;
- (c) capitalization of income;

are neither separately or collectively final. We have, therefore, turned to a consideration of the income producing power of the security and have applied that power to a uniform amortization of the principal borrowed. Upon no other basis may the savings bank loan predicated upon real estate security be safeguarded, whether that loan be made directly by the bank to the individual borrower or collectively by our banks through their purchase of bonds.

##### Utility Bonds.

Of equal interest is the investigation in connection with public utility bonds. As of June 30, 1919, the department had certified bonds of

this nature aggregating over one hundred and thirty-two million dollars. In the following twelve months ending June 30, 1920, bonds aggregating \$53,243,000 were certified and since that time to date \$49,332,000 par value were added.

The past fiscal year has been one of unusual activity in the bond market. New financing, held back during the period of the war, continued without abatement and reached its highest proportions in the late spring of this year. At that time many foresaw a raise in the price of money and hastened to provide for their present and future needs through the medium of stock or bond issues at the rate then prevailing.

The raise in interest rates checked but did not stop the movement. The necessity for refunding issues falling due and the replacement of wornout equipment and the making of necessary extensions by public utilities as well as the desire of many corporations to fund their debts so as to meet an expected depression, are all elements which have combined to bring forth new issues of securities at prices attractive to the investors, but costly to the borrowers. Much of this late financing is for short periods and will be refunded at the earliest return to normal conditions.

During the fiscal year just closed, June 30, 1920, this department had investigated and certified for this purpose bonds aggregating \$89,580,000. These securities added to those which had already been certified made a total of \$279,240,000 in bonds which were eligible for investment by savings banks at that time. On the same day, June 30, 1920, our savings banks had invested in bonds the sum of \$274,812,353.89. When it is remembered that more than half of the securities which are held by savings banks are in the form of governmental and municipal bonds, which do not require certification by this department, it is apparent that the savings banks have a wide field from which to select investments. This fact is further emphasized when we find that since June 30, 1920, and up to October 31, 1920, there have been added to this list bonds aggregating \$72,664,000, making available for savings bank investments an aggregate sum of \$351,904,000. Compare with this amount the aggregate bond holdings of all state banks, including commercial banks, on June 30, 1920, which was \$340,340,827. At the date of the last available called report, September 8, 1920, bond holdings by savings banks amounted to \$281,415,359, and by all state banks to \$355,963,773.

The characterization of bonds as legal for investment by savings banks is primarily a test of their attributes as investment securities. Savings banks find therefore an open and eager competitor for these bonds in the discriminating investor who seriously limits the field of investment.

## LEGISLATION NECESSARY TO MEET MODERN FINANCE.

It is my purpose to present for the consideration of the legislature at its next session certain amendments to the Bank Act which I believe are of first importance in connection with the orderly and necessary operation of our banks, particularly in that relation which suggests that they should have the fullest liberality within the limits of safety in functioning both as commercial and savings banks.

It is my intention to recommend that savings banks be permitted to invest through the medium of purchase or of discount in a larger amount of bankers' and trade acceptances and commercial paper.

The purchase or discount by savings banks of such securities has occasioned a widespread discussion and a uniform approval of such enterprise, particularly the investment in bankers' acceptances. This credit instrument is universally recognized as the highest type of commercial credit and it represents in the pouches of our savings banks a literal, secondary reserve that may be commanded at any time the necessities of the owning bank may demand. In very few cases only have savings banks made a practice of endorsing and reselling these acceptances immediately to the Federal Reserve Bank, thus forcing the latter to support the market. There is a gratifying showing of an increased demand for acceptances from our savings banks in the state showing an appreciation of the bankers' acceptances as an ideal investment for them.

This movement and interest on the part of our savings banks are largely to be accounted for by the decrease of the competition of government certificates of indebtedness as a medium for the employment of banking funds for short periods. A far better and more substantial bill market will come with the decrease of government borrowing and a better practice than investments in stock exchange collateral will follow this modification of governmental finance.

I wish also to strengthen the laws that have application to the establishment of mortgage guaranty certificates as legal investments for savings banks. Under the present law my authority with reference to these securities is of no practical value. As the savings banks are the ultimate purchasers of these securities, at least in theory, there should be such changes in the law as will give to the Superintendent of Banks a substantial and determining influence in fixing the character of such investments.

The unexampled expansion of foreign trade as it applies to our state finances has left our banking law inadequate to meet new and modern conditions, particularly as these conditions are reflected in the activities of the larger acceptance corporations. It is necessary that our law be amended to take cognizance of the peculiar functioning of these

corporations as distinguished from the customary province of the ordinary commercial bank. Allied to this discussion and demanding solution is the problem that has arisen through the desire of many persons, copartnerships and corporations to deal in foreign exchange. Other state jurisdictions in America have met this situation by new laws and it is imperative that we follow their example so that even this business may be governed and supervised upon the same theory and with the same practice that are employed in connection with every financial institution dealing with the people of this state.

The statute which governs the functioning of our commercial banks is now archaic because of the new and modern implements of finance introduced by the federal reserve system. National banks in California have consequently an advantage over state commercial banks and it is my purpose to equalize this difference, placing our own institutions upon a parity of operation with their national competitors. This is a very necessary change in our law. It is required also that those banks in our state system that have become members of the Federal Reserve Bank and subject to the reserve requirements of the federal reserve system should be placed upon an equality at least with those banks that are not members of this system, particularly with reference to the reserve requirements. As the law now reads, member banks, particularly the savings banks and savings departments of departmental banks, are required to maintain a reserve more exacting than nonmember banks. Obviously this is an unnecessary restriction upon banks that not only in theory but in operation are within the protection of a mobilized reserve.

It is my purpose also to suggest a modification of the relationship between capital and surplus on the one hand and deposit liability on the other, both in savings and commercial banks. There would seem to be no objection to a judicious liberalization of this relationship to permit our banks to function under the pressure of enormously increased deposits without capitalizing themselves beyond the credit needs of the communities which they serve. Under the present law needless increases in capital are required. As this capital primarily is the standard of investment and loaning capacity it seems useless to demand increases in capital and surplus where the needs of the community ask for no greater accommodations than they now receive. Such a change, however, should be accomplished with an attendant and increasing security provided by a progressively larger surplus in each institution.

I intend also to ask the legislature to restore to the Bank Act those provisions which relate to trust deposits, the deposits of minors and particularly joint deposits with right of survivorship. Inadvertently the last named provision was repealed at the last session of the legislature and its restoration is highly desirable.

I intend also to recommend simplification of the machinery for purchase and sale agreement as between banks especially in that relation which requires the maintenance of capital of the selling bank for a period of one year after the last date of publication of the notice of agreement of sale and purchase. No bank will be permitted to sell its assets and transfer its liabilities to a moribund institution. The responsibilities of the purchasing bank remain as before and unquestionably they are fully adequate to any possible discussion of the substantial right of the creditors of the selling bank.

Such other amendments that I may urge for adoption by the legislature will have concern with the minor questions of routine and regularity. They will not have application to the substantive values of the Bank Act. As is my practice, I shall consult with the legislative committee of the California Bankers Association with the thought that we may agree upon a united plan and offer a single set of amendments to the legislature. Questions of actual practice and of locality conditions are essentially within the observation of the bankers and through the agency of their legislative committee I find it an admirable plan to consult, cooperate and, if possible, agree upon what is best, not only from the point of view of the bankers but within the objective of this department as a visitorial authority.

#### GRATIFYING RESULTS IN LIQUIDATION OF BANKS.

During the year special attention was given to the affairs of banks in liquidation in order that these institutions might finally be closed in the records of this office, their assets distributed and their debts, as far as they could be, paid. I am gratified to report that of the seven banks in process of liquidation, three were disposed of during the fiscal period. I closed liquidation of State Savings and Commercial Bank on September 18, 1920. The affairs of this defunct institution have been dragging their slow course since July 17, 1909. An aggregate of 68½ per cent of the deposit liability was paid in dividends. On September 18, 1920, I concluded liquidation of the affairs of Union State Bank of San Francisco, which, at the time of its collapse on July 17, 1909, had taken certain steps to consolidate with State Savings and Commercial Bank. Its assets, therefore, were in the possession of State Savings and Commercial Bank and dividends in

the amount of only 2 per cent were paid. On August 13, 1920, liquidation of Japanese Bank of Sacramento was ended and dividends in an aggregate of 36.9 per cent were paid. This institution was closed on October 17, 1909, and it is a matter of congratulation that after all of these years its affairs have been concluded.

A suit now pending in the courts of this state, and the possession of a small amount of real estate, have prevented the conclusion of liquidation in connection with Japanese American Bank of San Francisco. This institution was closed on October 18, 1909. Dividends amounting to 33½ per cent have been paid and it is impossible to go forward until there has been a determination of the pending litigation and a sale of the real property owned by the bank. A similar situation faces me in connection with the Kimmon Ginko, the Golden Gate Bank of San Francisco, whose doors were closed on March 29, 1909, and whose affairs are yet pending. Real estate, small in area and in value, must be disposed of before this institution may be finally liquidated. I feel certain that very shortly we shall conclude all proceedings in connection with this bank.

I am gratified to report a substantial accomplishment in connection with the liquidation of Kern Valley Bank of Bakersfield. During the year we succeeded in collecting a balance on the judgment against R. McDonald and others and we disposed of the land underlying the Sunset Road Oil Bonds. This disposition is subject yet to the equities that may be involved in certain litigation now in progress. I expect, however, at the beginning of the calendar year, to pay a final dividend to the creditors of this institution. This bank was closed on May 12, 1911, and dividends aggregating 52 per cent have been paid. We are succeeding in forcing the affairs of this delayed liquidation to a rapid conclusion.

Union Savings Bank of Santa Rosa, still in liquidation, is not a matter of concern to the general public as I am pleased to report that the depositors received their money in full. Two actions are pending and upon their conclusion I expect that a substantial amount, probably in the neighborhood of \$13,500, will be realized to pay the stockholders of the defunct institution part of their investment. This bank was closed on September 30, 1918, and notwithstanding serious blunders were committed at the inception of proceedings in liquidation, we have succeeded in paying the depositors all of their money and more quickly than was done in connection with any other wrecked banking institution in the state.

Appended hereto and made a part of this report are the following:

1. Summary of condition of every state bank.
2. Summary of condition of trust departments of national banks.
3. List of new banks and branch offices.

4. Name and compensation of each person employed and the whole amount of receipts and disbursements of the department during the fiscal year.

5. Names of banks placed in the hands of the Superintendent of Banks in process of liquidation and the amount of dividends paid thereon.

6. Miscellaneous changes in banks.

7. Reports of deposits in state and national banks unclaimed for more than twenty years.

8. Banks authorized to make collection of savings from school children.

9. Tabulated statements of condition of banks.

### CONCLUSION.

This report summarizes the high lights of California finance and the shadows that accentuate them. Our problems are manifest and many. During the period of readjustment which we have now entered, we shall be called upon to undergo hardships and to withstand many shocks, some of which may be heavy and sudden. The downward slide to normal conditions and normal values may contain many bumps. In looking ahead and measuring these hazards of the future there must come to any man a sense of the blessing of living and working in California.

During all the troubled days of the war, and since, California's march industrially and financially never ceased. As a matter of fact, in our internal development the war condition was, in a sense, a blessing in disguise. Under its impetus and supported by war prices for food products, we achieved, in a few years, an agricultural development with its incidental irrigation development that would not otherwise have been possible. A large part of the surplus profits of agricultural California, in the last five years, has gone back into the intensive development of her agricultural assets.

We may thank God that we live in a state that is not finished. Our prosperity is not based on any one or any dozen things—our eggs are not all in one basket. We face depression in specific lines without lowering the general tone of our situation. The old California is passing, the industries that made the old California are still among our assets in larger measure than ever before, but to them is being added constantly new industries of epoch-making magnitude, such as the rice industry, the cotton industry, etc. Our varied climatic conditions and soil resources give us, in some part of California, a situation congenial to nearly every plant and tree and shrub of use or profit to man.

To discuss this situation we must need speak in hyperbole.

Our intensive internal development has really just begun. We have the potential ability to support a population many times greater than our present census enumeration.

Not only does this development, present and future, guarantee our prosperity, but our geographical location clinches it. We are the custodians of the western gates of this great continent. Through our doors flows the commerce in and out of the western world. Inevitably we gather toll from this tide, both coming and going. More than that we are the preferred merchant by virtue of our position for the sale of everything that the world is drawing from Western America.

The South American field, the Oriental markets are beckoning to our jobbers, our exporters, our growers. Behind them are the mounting figures of our financial strength, as a guarantee that their enterprise, in developing foreign markets, can be financed. These are the things upon which we may base the certainty that problems of readjustment can and will be adequately met and solved. To their solution we must bring our best thought, our most conservative judgment and a courage to surmount all obstacles.

That these qualities are inherent in the men and women who have made California what she is, and who are the human links that bind our fertile fields with our centers of finance, is self-evident. Without these qualities the California of today would be a very different place.

It is therefore with healthy, intelligent optimism that we face the future, an optimism born of past performance, of present conditions and of future promise.

Yours very truly,

CHARLES F. STERN,  
*Suprintendent of Banks.*

# STATEMENTS.
